# CMS Open Data Workshop for Theorists

Remote Fermilab LPC Workshop, September 30 – October 2, 2020

## Organizing Committee:

Matthew Bellis (Siena College)  
Edgar Carrera (U. San Francisco de Quito)  
Kati Lassila-Perini (U. of Helsinki)  
Jesse Thaler (MIT)

## Local Organizing Committee:

Gabriele Benelli (Brown U.)  
Christian Herwig (Fermilab)  
Julie Hogan (Bethel U. and Brown U.)  
Clemens Lange (CERN)  
Andrew Melo (Vanderbilt U.)  
Nada Mohamed (Siena College)  
Stephen Mrenna (Fermilab)  
Kevin Pedro (Fermilab)  
Emanuele Usai (Brown U.)  
David Yu (Brown U.)

## LPC Events Committee:

Gabriele Benelli (Brown U., Co-Chair)  
Kevin Pedro (Fermilab, Co-Chair)

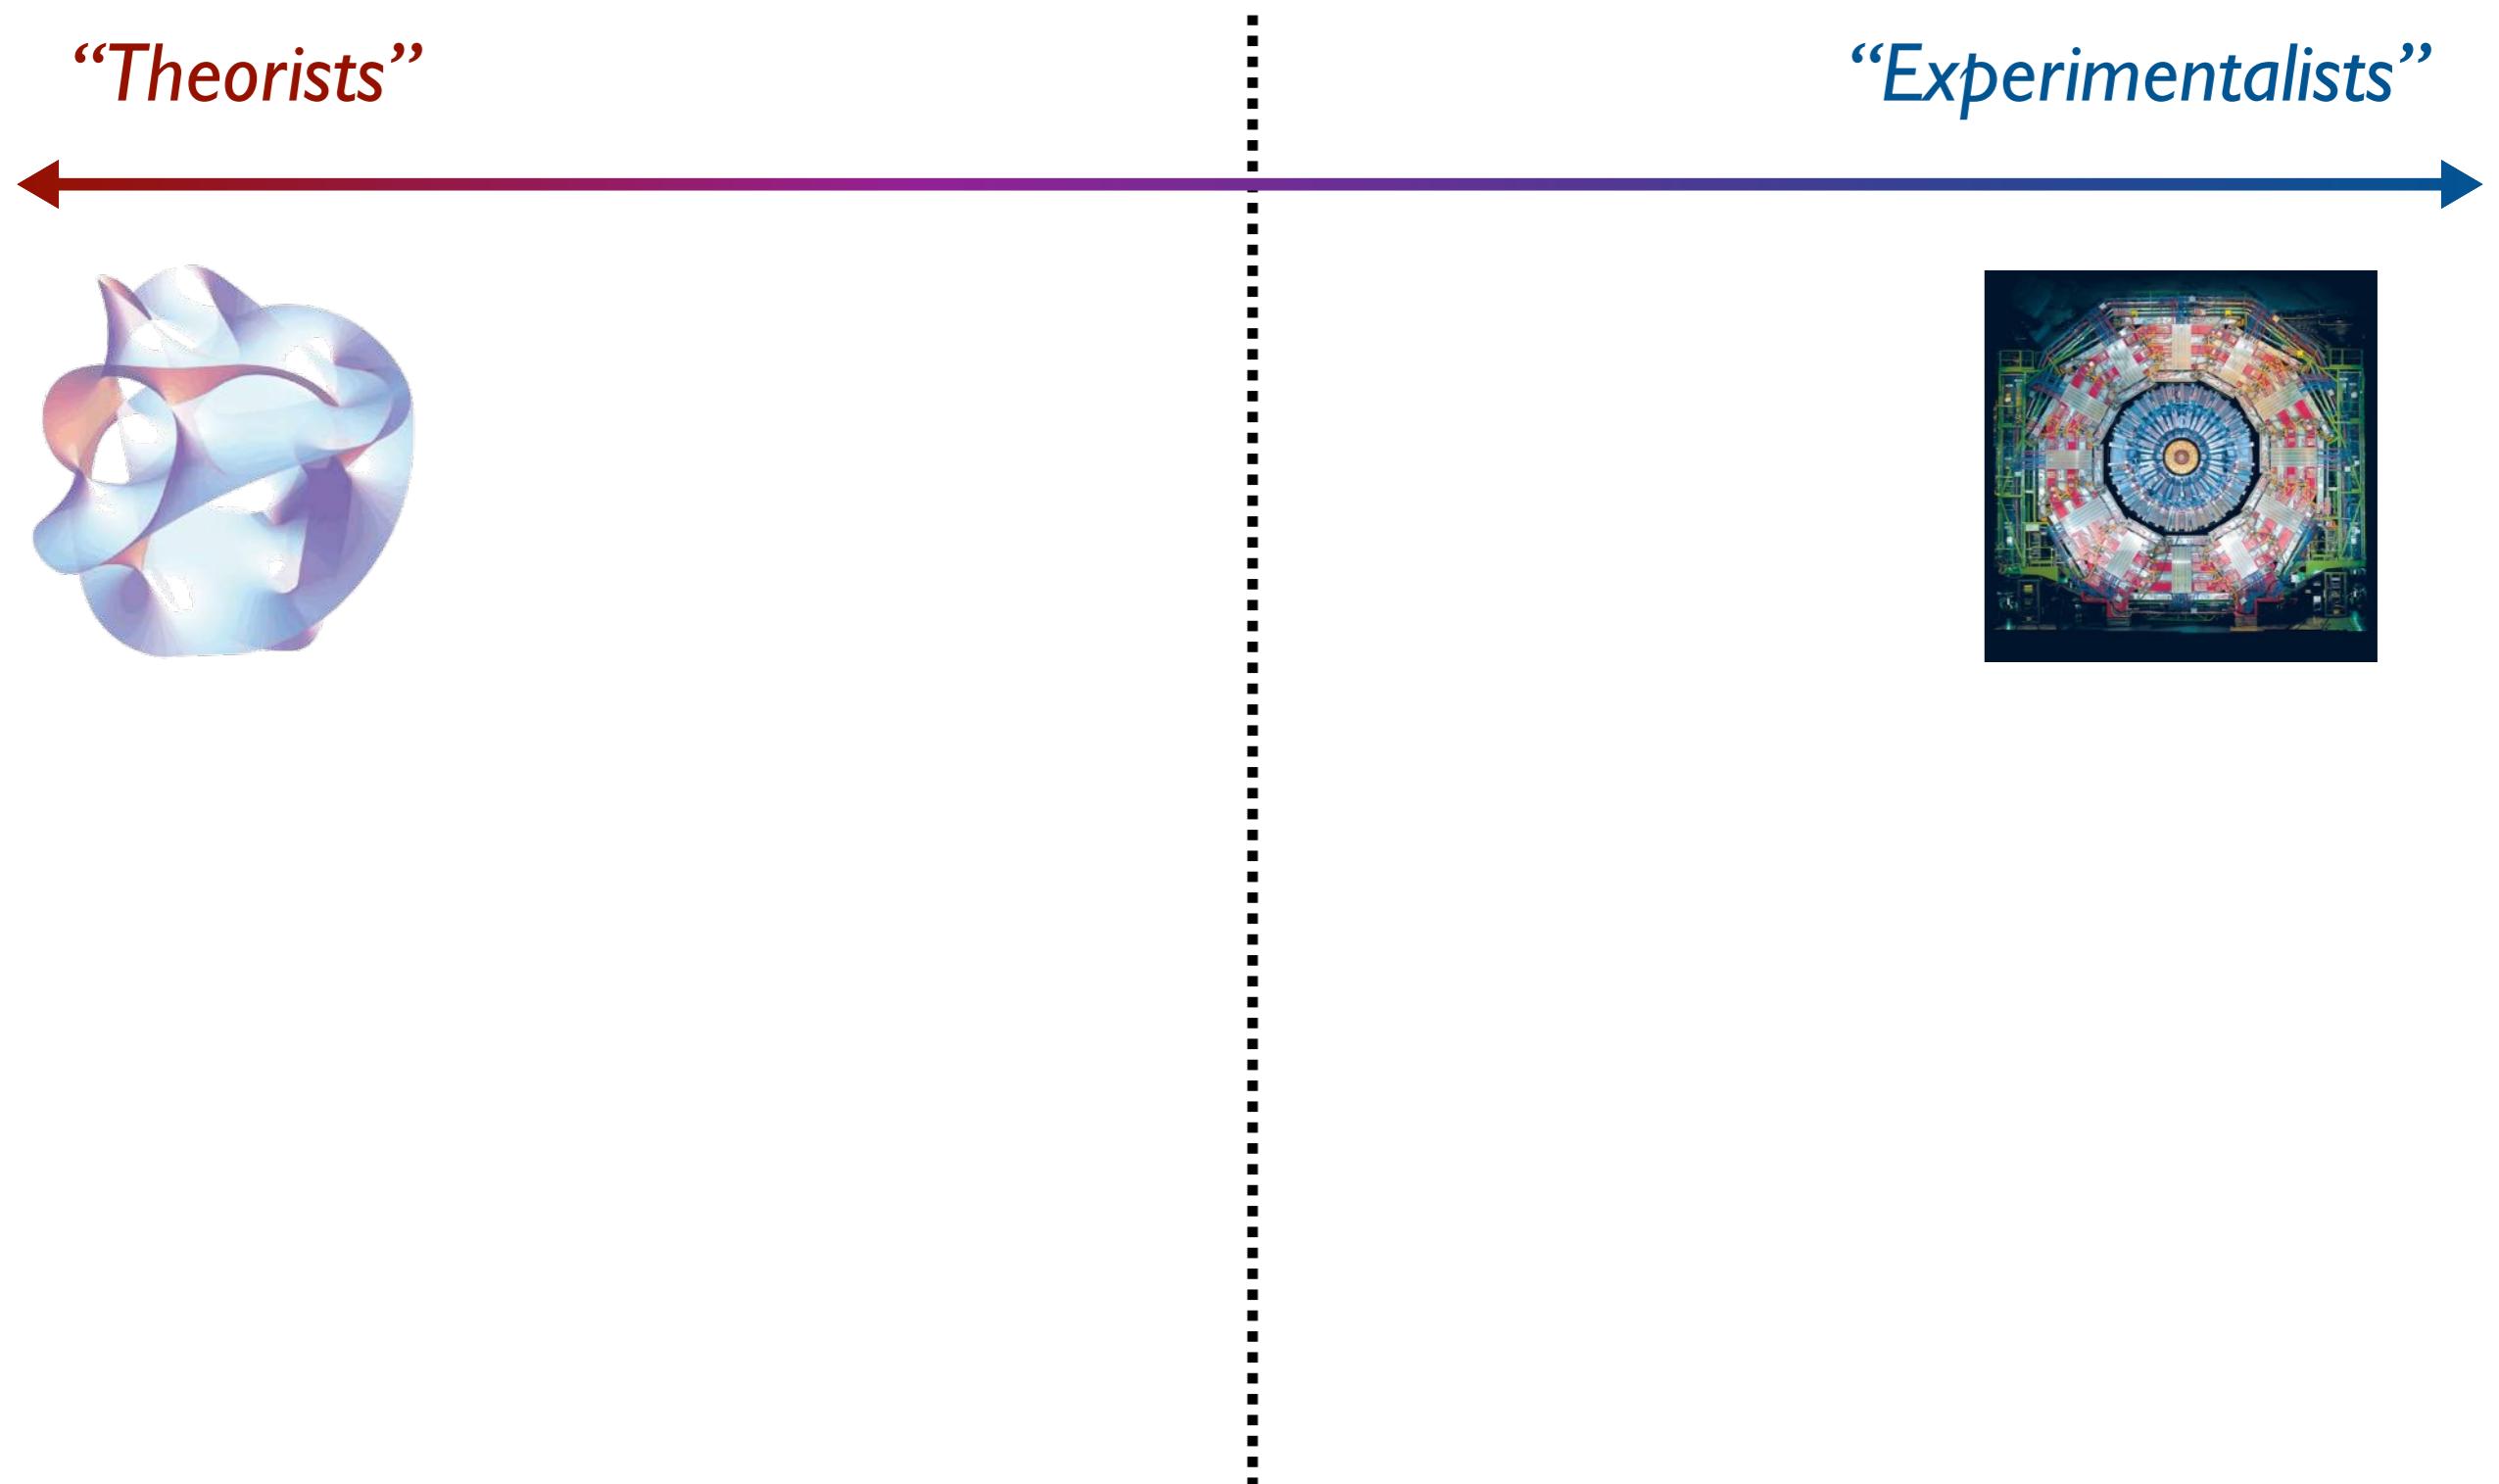

## LPC Coordinators:

Cecilia Gerber (UIC)  
Sergo Jindariani (Fermilab)

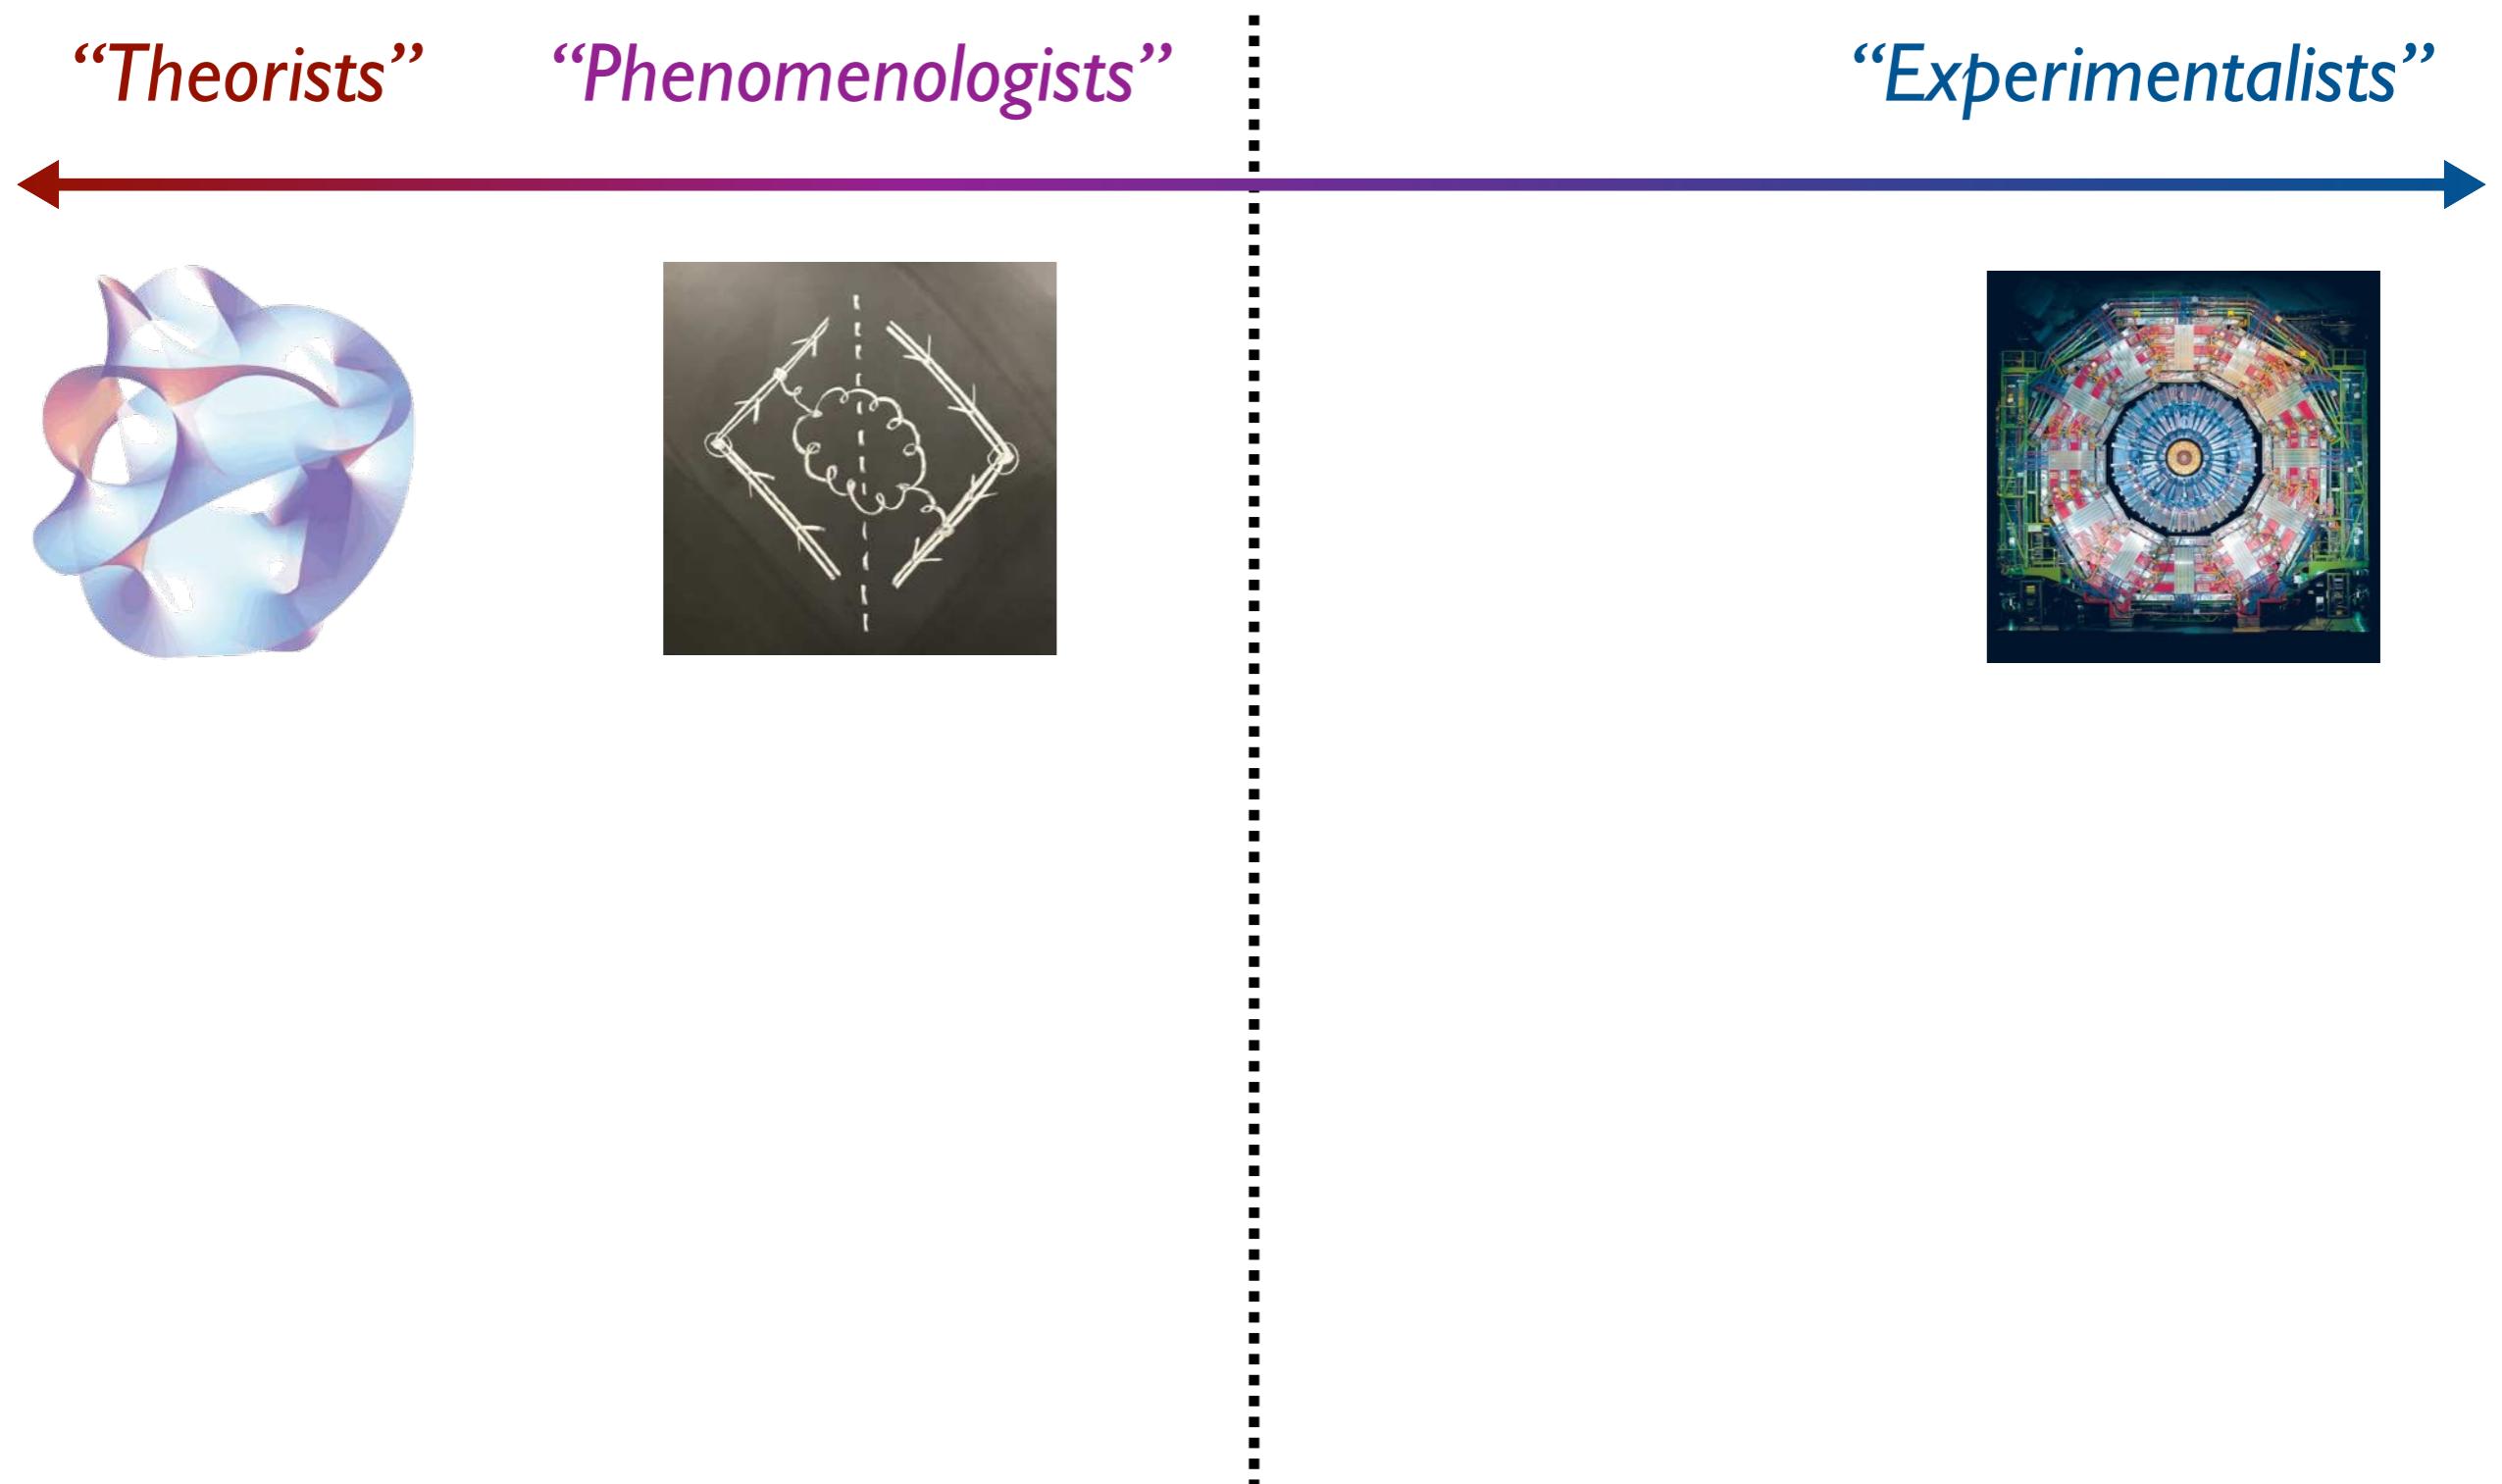

**Goal: Enable theorists to use real experimental collider data in their research**

## Introducing the CMS Open Data

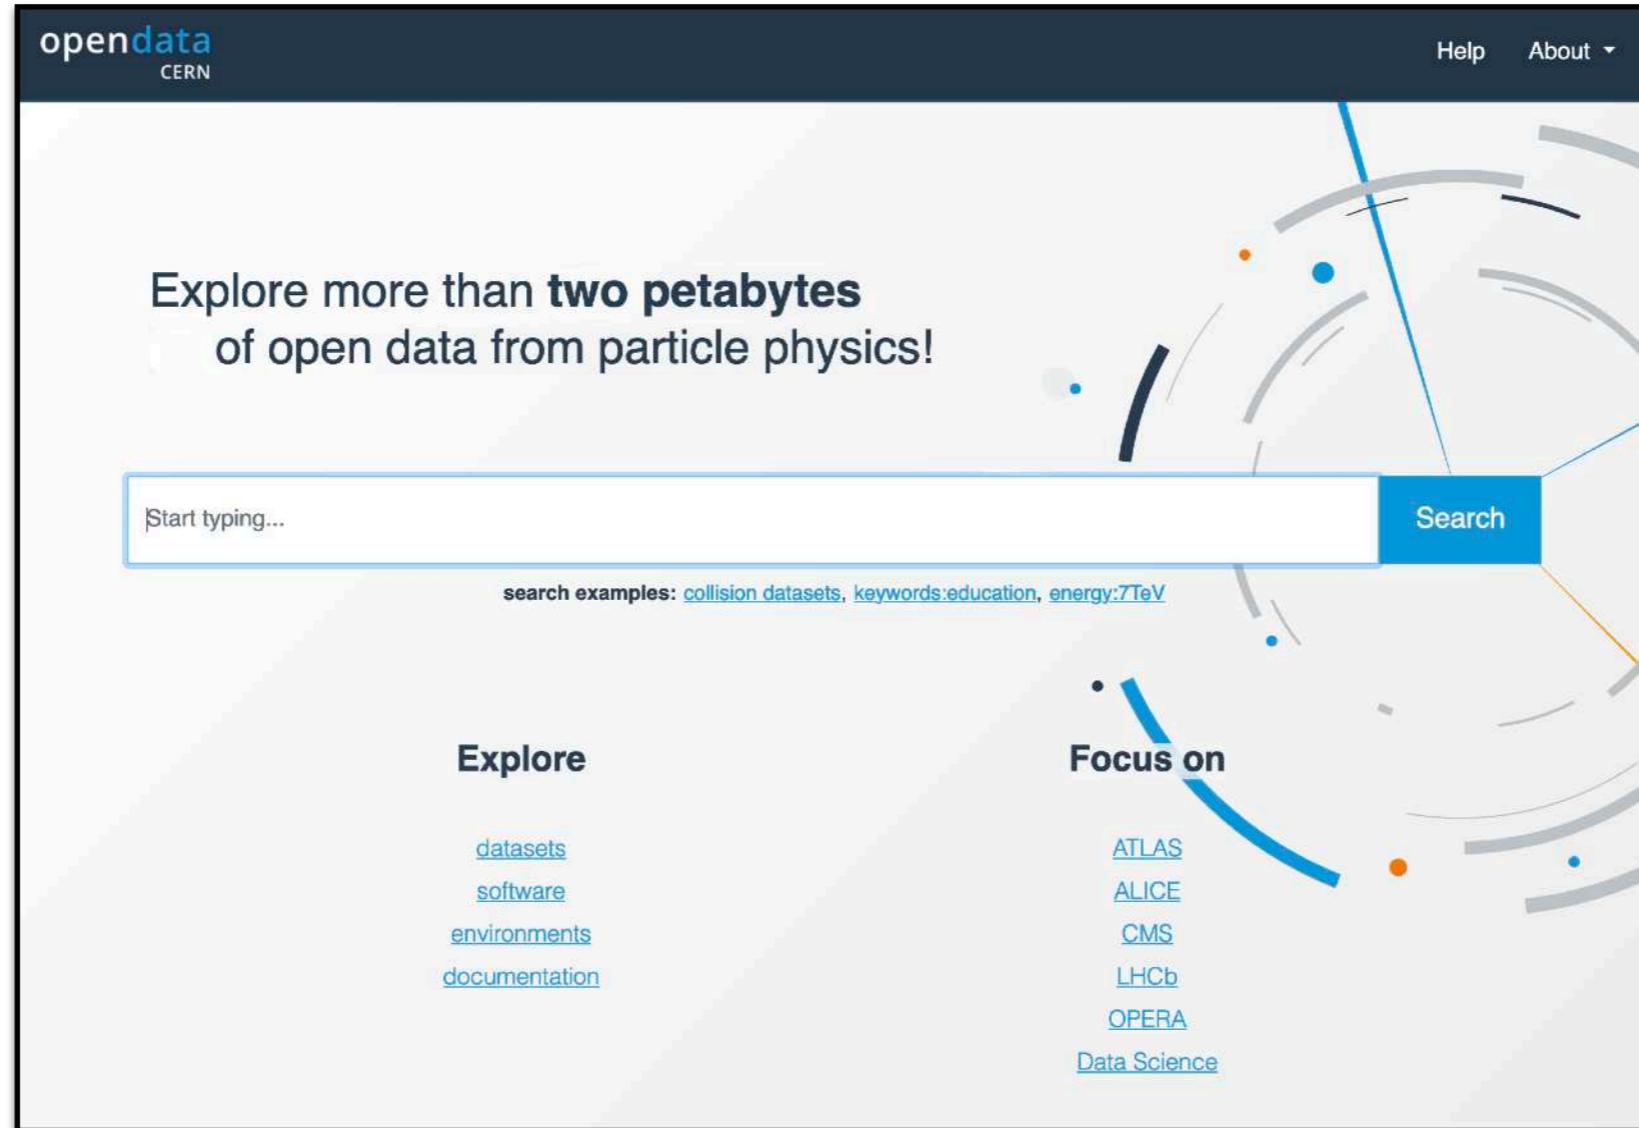

Adventures with Public Collider Data

Looking to the Past, Present, and Future

# What is CMS Open Data?

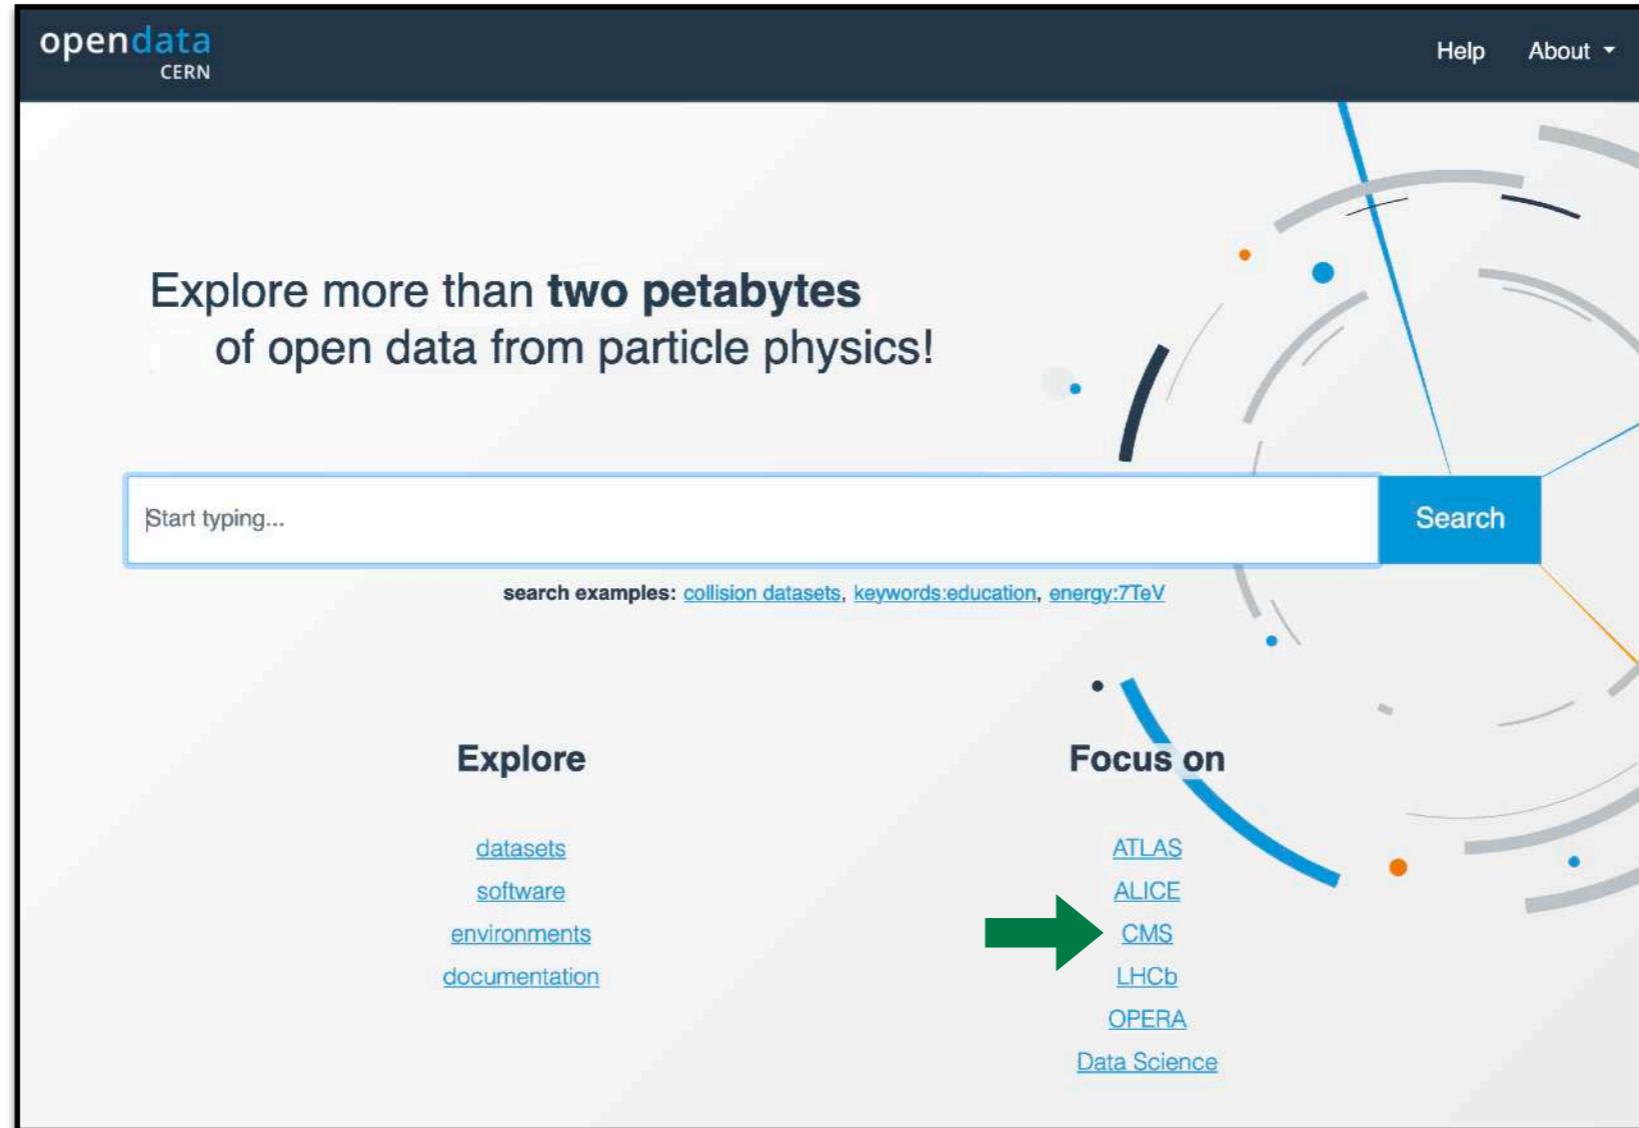

<http://opendata.cern.ch/>

The screenshot shows the CMS Open Data homepage. At the top, it says "Explore more than **two petabytes** of open data from particle physics!" Below this is a search bar with the placeholder "Start typing..." and a "Search" button. Underneath the search bar, it says "search examples: [collision datasets](#), [keywords:education](#), [energy:7TeV](#)". To the left, there's a section titled "Explore" with links to "datasets", "software", "environments", and "documentation". To the right, there's a section titled "Focus on" with links to "ATLAS", "ALICE", "CMS", "LHCb", "OPERA", and "Data Science". The background features a light gray illustration of particle tracks and particles.

# What is CMS Open Data?

<http://opendata.cern.ch/>

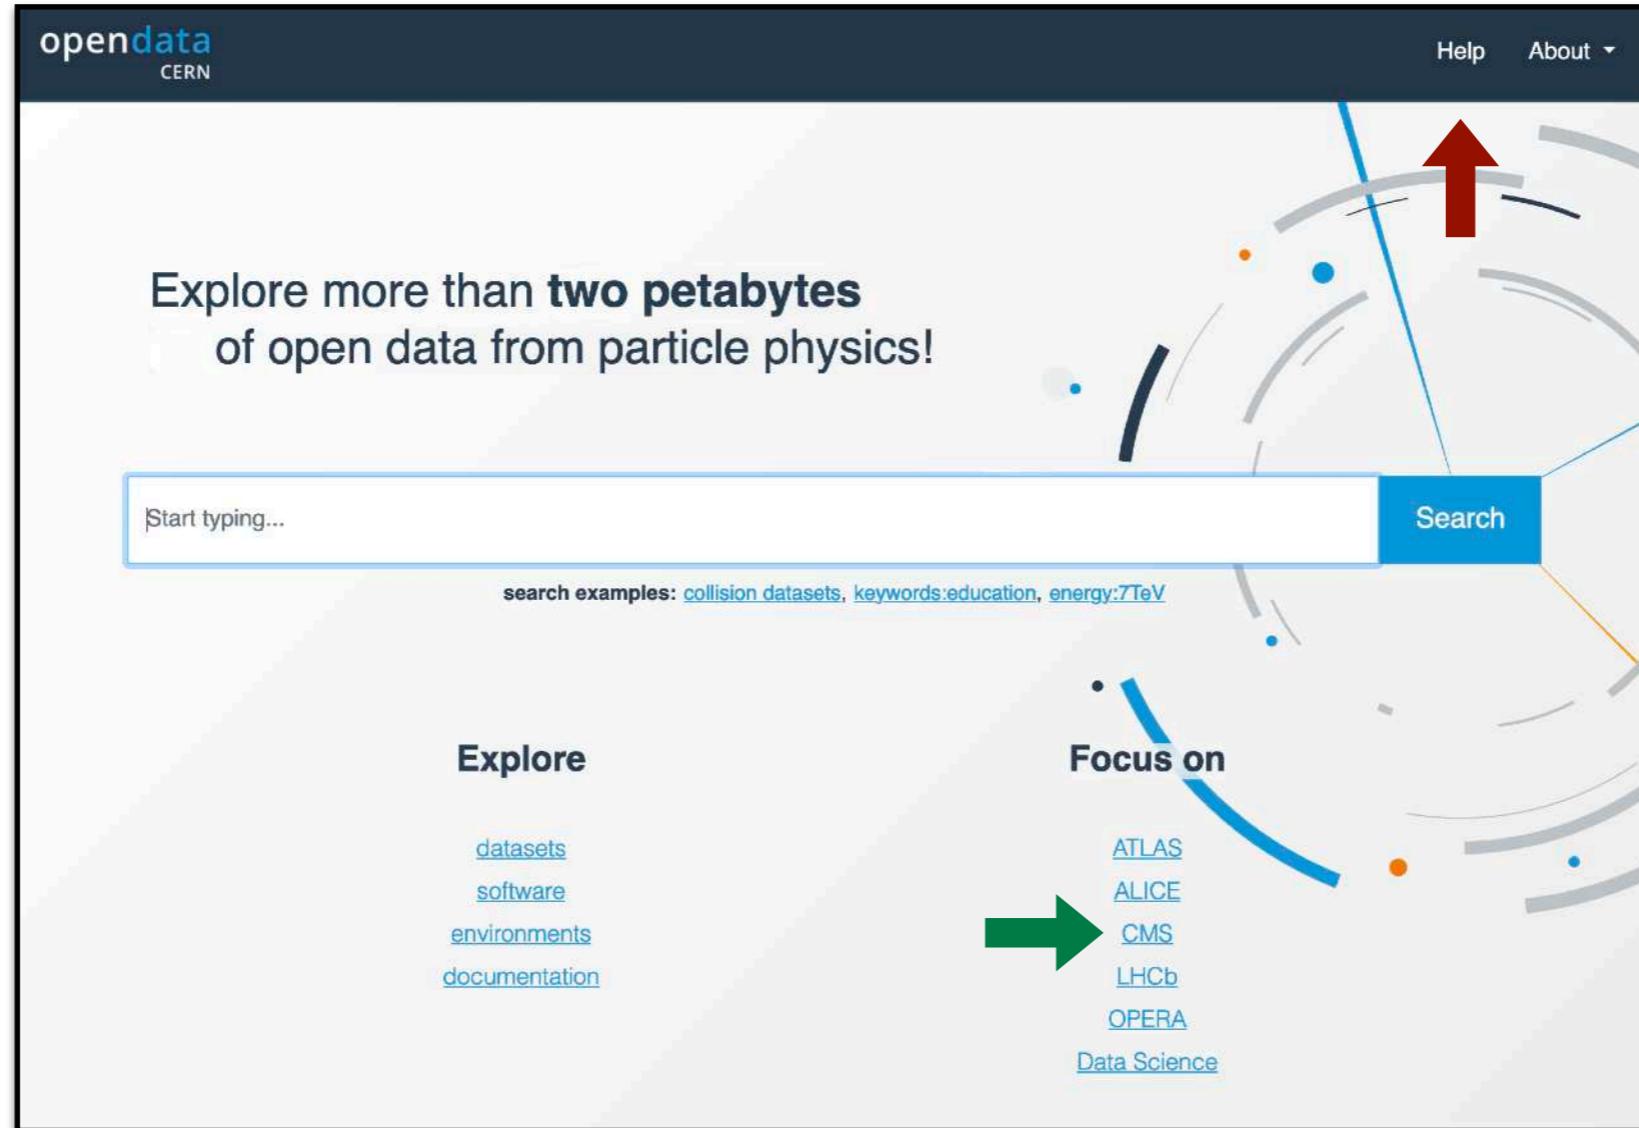

A screenshot of the CMS Open Data search interface. The top navigation bar includes the 'opendata CERN' logo, 'Help', and 'About'. The main heading says 'Explore more than **two petabytes** of open data from particle physics!'. Below it is a search bar with placeholder text 'Start typing...' and a 'Search' button. A note below the search bar lists 'search examples: collision datasets, keywords:education, energy:7TeV'. On the left, there's an 'Explore' section with links to 'datasets', 'software', 'environments', and 'documentation'. On the right, a 'Focus on' section lists experiment names: ATLAS, ALICE, CMS, LHCb, OPERA, and Data Science. A green arrow points from the text 'Same data format (AOD) and software framework (CMSSW) used by CMS' to the 'CMS' entry in the 'Focus on' list.

*Same data format (AOD) and software framework (CMSSW) used by CMS*

# What is CMS Open Data?

<http://opendata.cern.ch/>

A screenshot of the CMS Open Data search interface. The top navigation bar includes the 'opendata CERN' logo, 'Help', and 'About'. The main area features a search bar with placeholder text 'Start typing...' and a 'Search' button. Below the search bar, 'search examples' are listed: collision datasets, keywords:education, energy:7TeV. To the left, a sidebar titled 'Explore' lists datasets, software, environments, and documentation. To the right, a section titled 'Focus on' lists ATLAS, ALICE, CMS (which is highlighted with a green arrow), LHCb, OPERA, and Data Science. The background features a stylized illustration of particle tracks and a central particle.

*Same data format (AOD) and software framework (CMSSW) used by CMS*

*Same steep learning curve (hence this week's LPC workshop)*

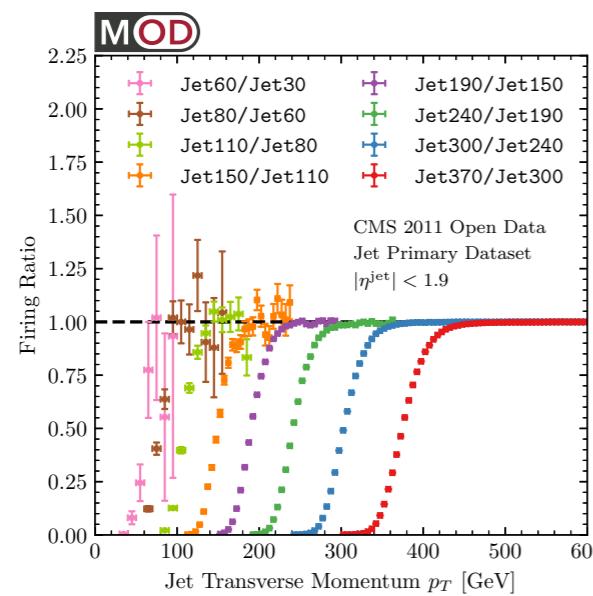

# What is CMS Open Data?

## Same experimental challenges!

### Accounting for triggers

*“Ich habe das [Strahlenergie Korrekturen] mit Stumpf und Stil verlernt.” ~ Emmy Noether*

[Komiske, Mastandrea, Metodiev, Naik, JDT, PRD 2020]

### Acceptances, efficiencies, uncertainties

	Central Value	Uncertainty
$\mathcal{L}$	$2.11 \text{ fb}^{-1}$	2.2%
$A_Z$	0.392	2.4%
$\sqrt{\epsilon_{\text{tr}}^Z}$ (i.e. per muon)	0.924	2.4%
$\sqrt{\epsilon_{\text{iso}}^Z}$ (i.e. per muon)	0.966	1.5%
Background	—	1.0%
Combined ( $\mathcal{L} A_Z \epsilon_{\text{tr}}^Z \epsilon_{\text{iso}}^Z$ )	$0.659 \text{ fb}^{-1}$	5.3%

$$I_{\text{comb}} = \frac{(p_T^{\text{track}} + E_T^{\text{ECAL}} + E_T^{\text{HCAL}})_{R<0.3}}{p_T^\mu}$$

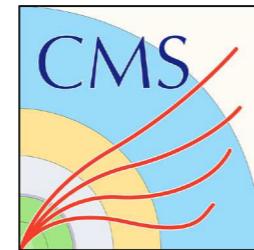

[Cesarotti, Soreq, Strassler, JDT, Xue, PRD 2019]

## *Dimuon Resonance Hunt*

# New Physics in Dimuons?

[LHC, PRL 2018]

# Giving Dimuons a (Lorentz) Boost

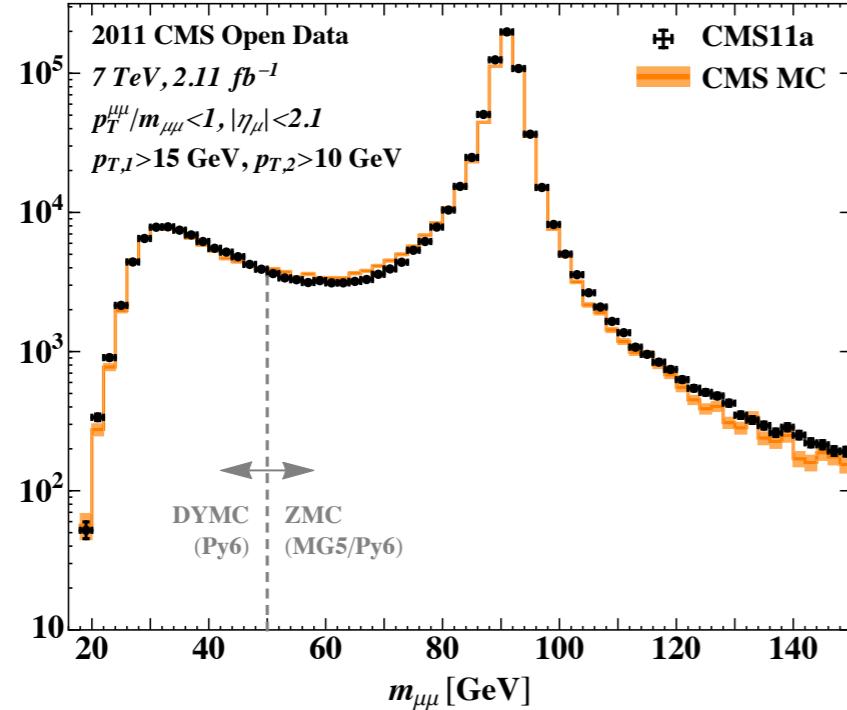

CMS has searches for boosted  $\mu^+ \mu^-$  plus specific recoil objects

No search (to our knowledge) for generic boosted  $\mu^+ \mu^-$  signature

[Cesarotti, Soreq, Strassler, JDT, Xue, [PRD 2019](#); motivated by Strassler, Zurek, [PLB 2007](#); limit from CMS, [JHEP 2017](#)]

# On the Road to Discovery?

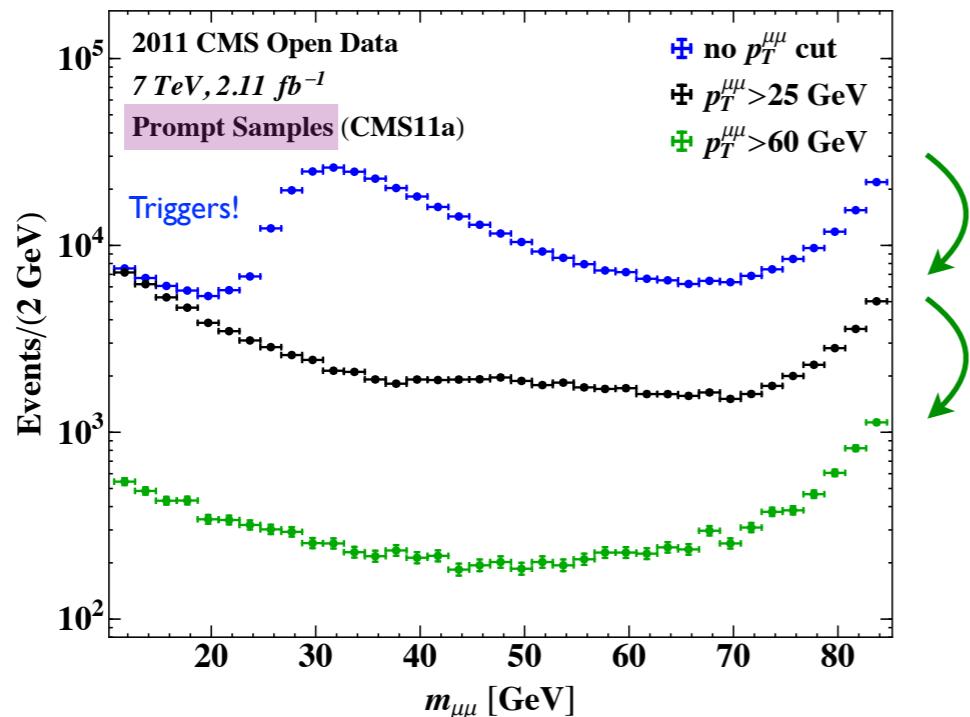

## (Re)measuring the Z Boson

Our Result:  $\sigma = 974 \pm 52 \text{ pb}$

Systematics limited by luminosity, acceptance, isolation efficiency, and background uncertainties

CMS 2011:  $\sigma = 986 \pm 31 \text{ pb}$

NNLO:  $\sigma = 970 \pm 30 \text{ pb}$

## Reaching into the Unknown

CMS tight muon selection\*

Prompt (or isolated) muon requirement

Dimuon transverse momentum cut

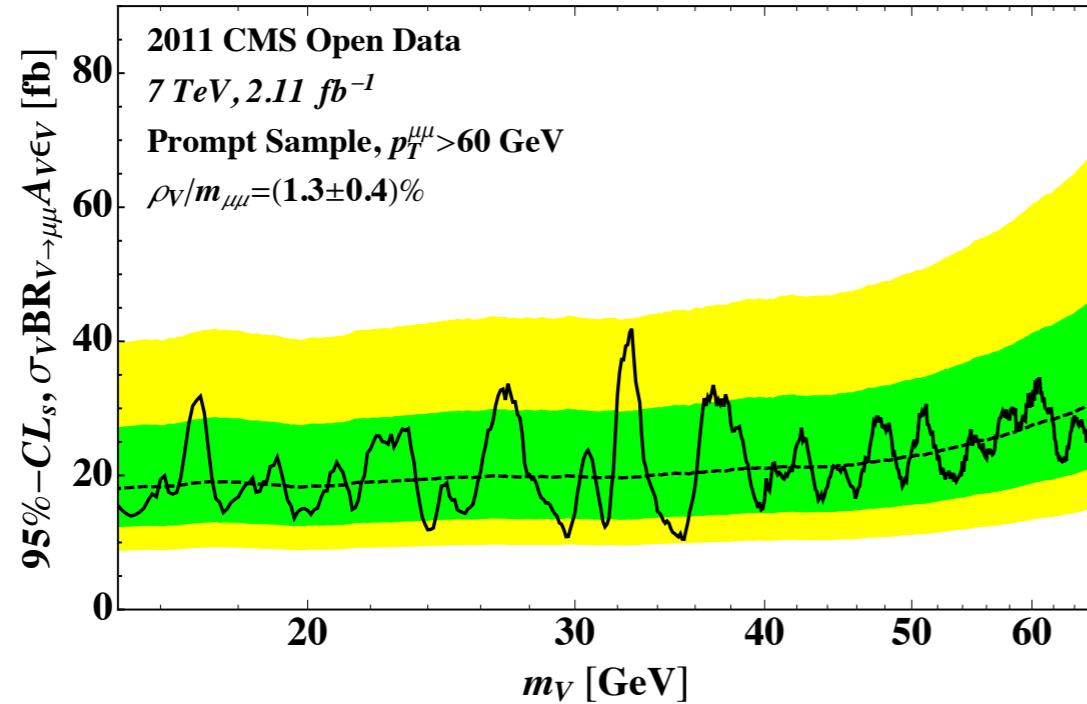

[Cesarotti, Soreq, Strassler, JDT, Xue, [PRD 2019](#);  
cf. CMS, [JHEP 2011](#); CMS, [JHEP 2013](#); Gavin, Li, Petriello, Quackenbush, [CPC 2011](#)]

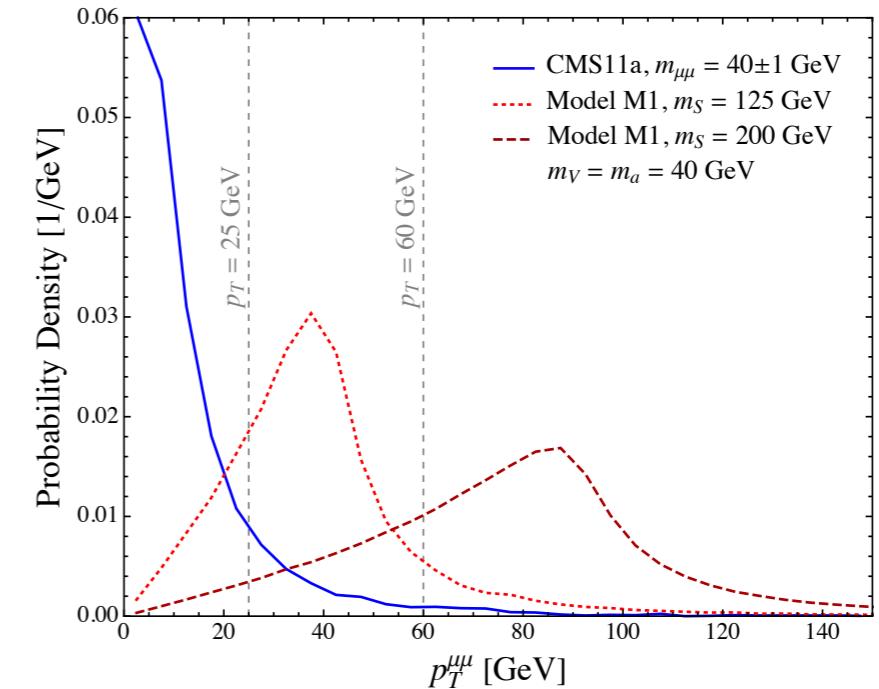

# Pushing to the Limit

“Facilitating dialogue between theory and experiment”

We didn't discovery anything...

... but we could have!

Derived new limits, which could be an **order of magnitude stronger** using LHC Run 2 data!

“Although searches using current open data are unlikely to uncover BSM phenomena on their own, they can help **demonstrate the value of certain search strategies** and justify the application of those strategies by the experimental collaborations on much larger data sets.”

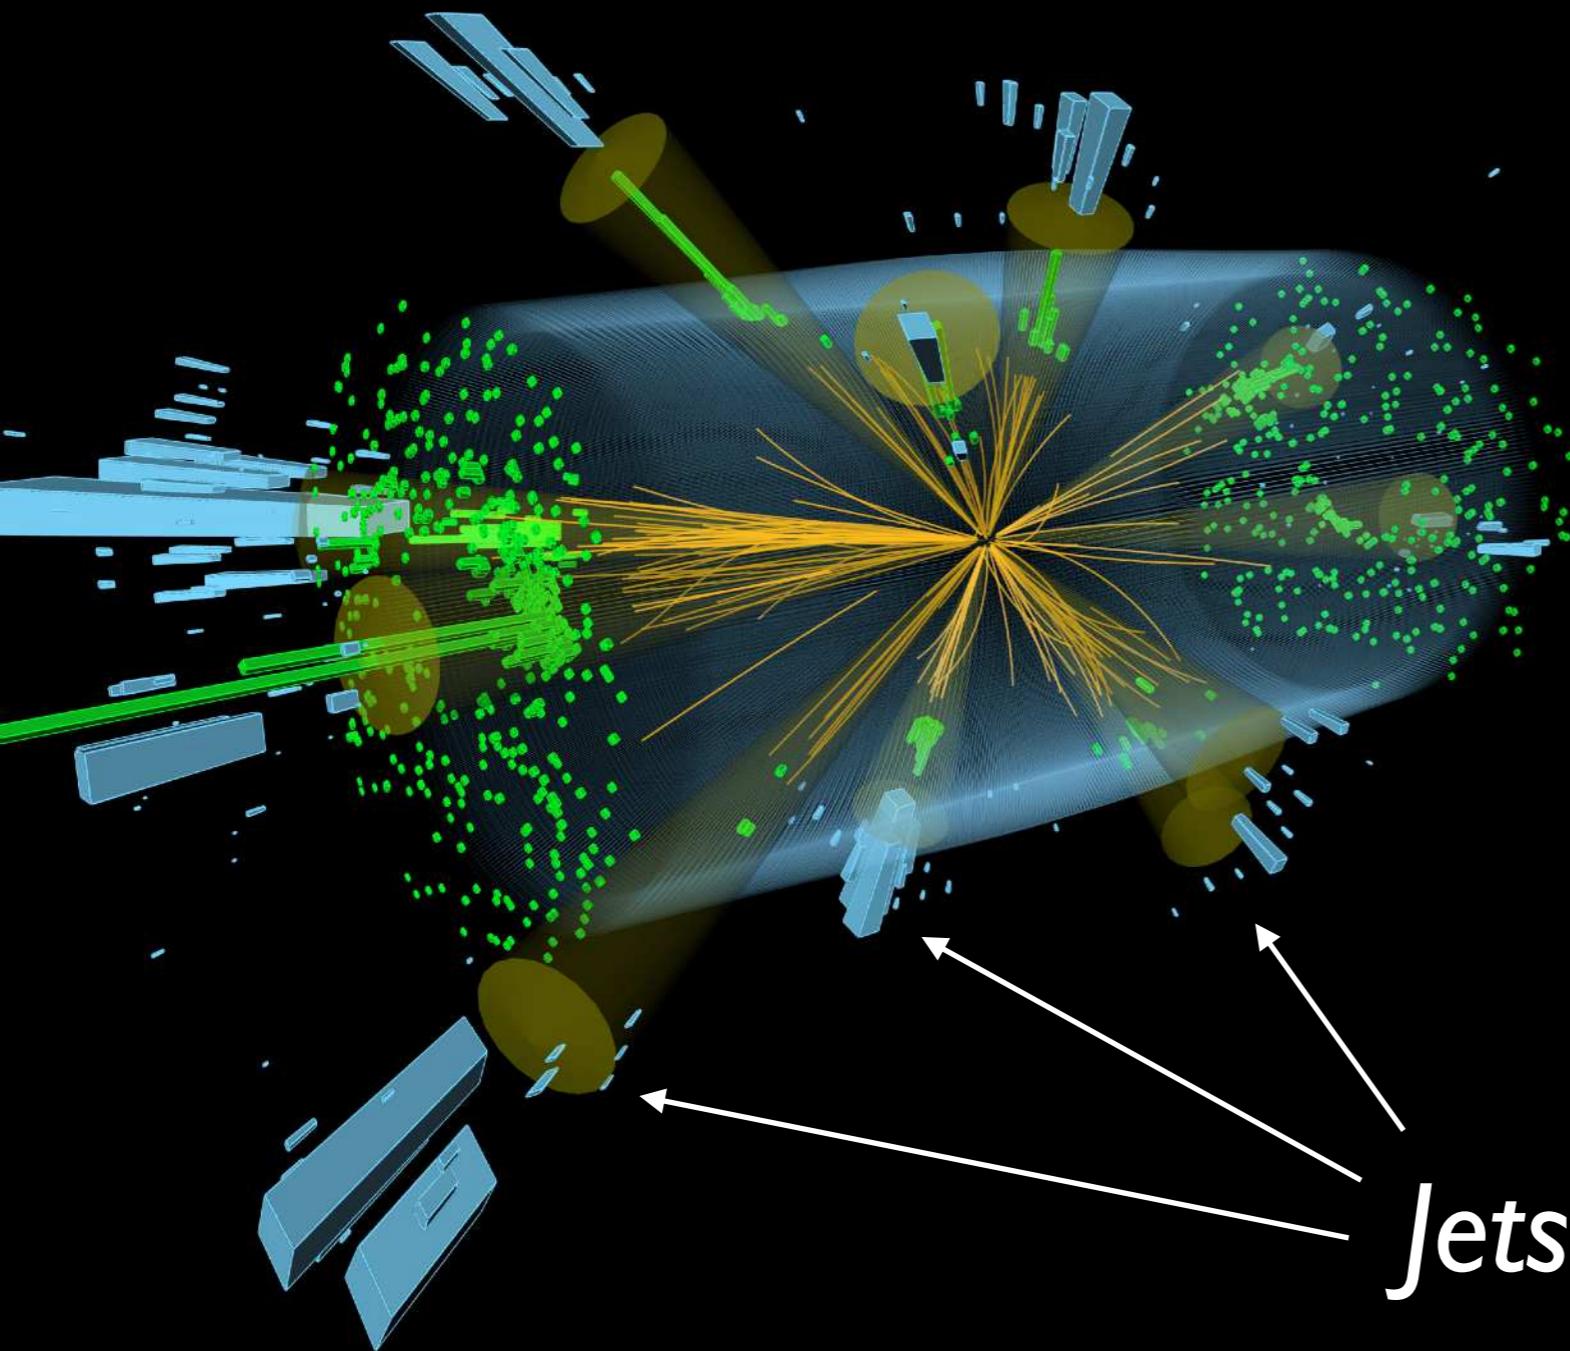

[Cesarotti, Soreq, Strassler, JDT, Xue, [PRD 2019](#)]

Jesse Thaler  
EE(E)C?  
To: Ian Moult

July 24, 2019 at 2:01 PM

JT

Hi Ian,  
I appreciate the provocative lunch! At some point, we should talk about what you might want to see measured on the CMS Open Data with respect to EE(E)C.  
Cheers,  
Jesse

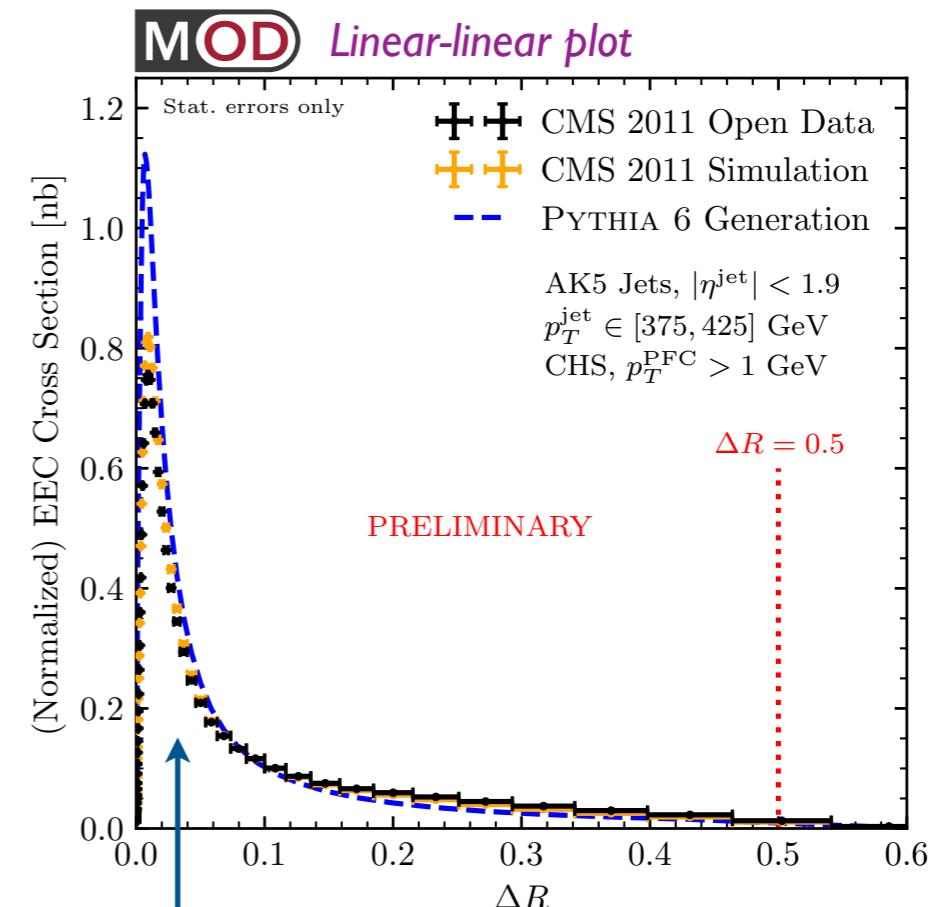

Jesse Thaler  
Preliminary EEC plot  
To: Ian Moult, Cc: Patrick Komiske

July 24, 2019 at 10:16 PM

JT

Hi Ian,  
Below is a preliminary EEC plot on the CMS Open Data, made by Patrick. (Strictly speaking, this is the pT-pT-Correlator...)  
We do this within single jets in the pT range specified in the plot, and the dashed vertical red line is the jet radius (beyond which things don't really make sense).

First Jet EEC Plot from the LHC (!)

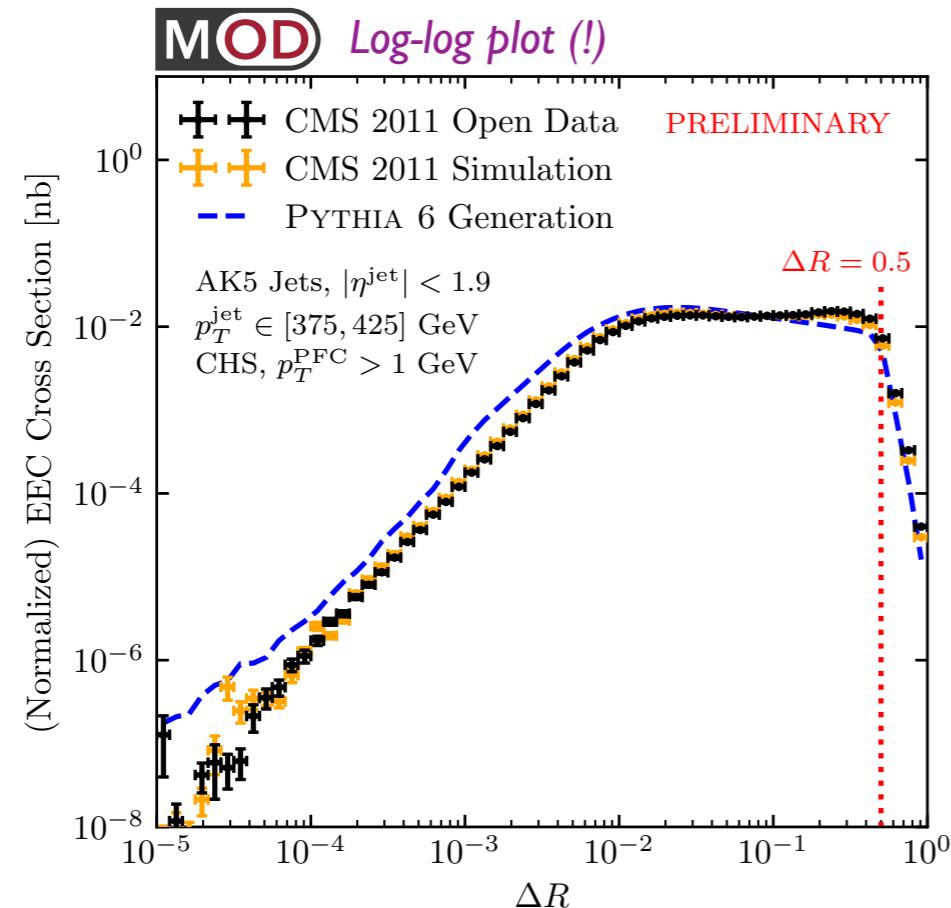

Are we learning something  
about small angle limit of QCD?

[Komiske, Moult, JDT, et al., in progress; see talk by Moult, [BOOST 2019](#)]

# QCD Phase Transition in Jets?

*“Enabling exploratory/  
proof-of-principle studies”*

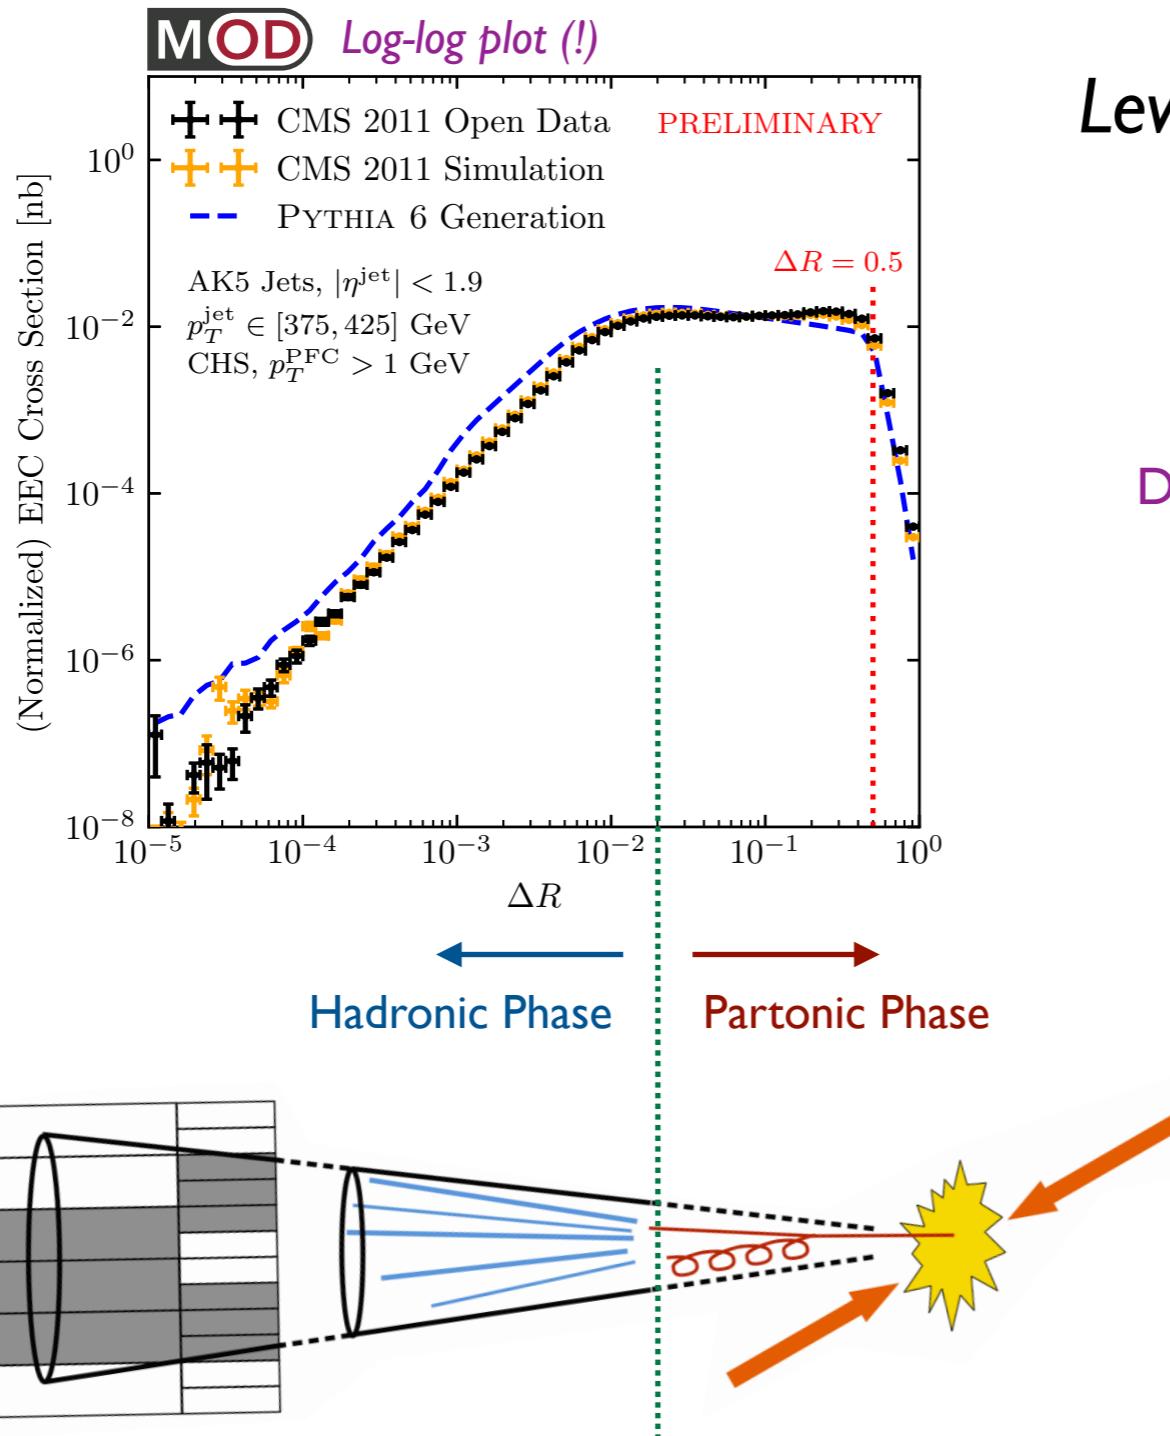

[Komiske, Moult, JDT, et al., in progress; see talk by Moult, [BOOST 2020](#)]

# QCD Phase Transition in Jets?

*“Enabling exploratory/  
proof-of-principle studies”*

**Leveraging complementary perspectives**

**Theory:** EEC probes different physics from standard jet observables

**Data Analysis:** Scaling behavior transition only apparent in log-log space

**Experiment:** Impressive angular resolution from CMS tracking system

*“I doubt that anyone can envision the result before seeing the open data plot.”*  
— Not Emmy Noether

[Komiske, Moult, JDT, et al., in progress; see talk by Moult, BOOST 2020]

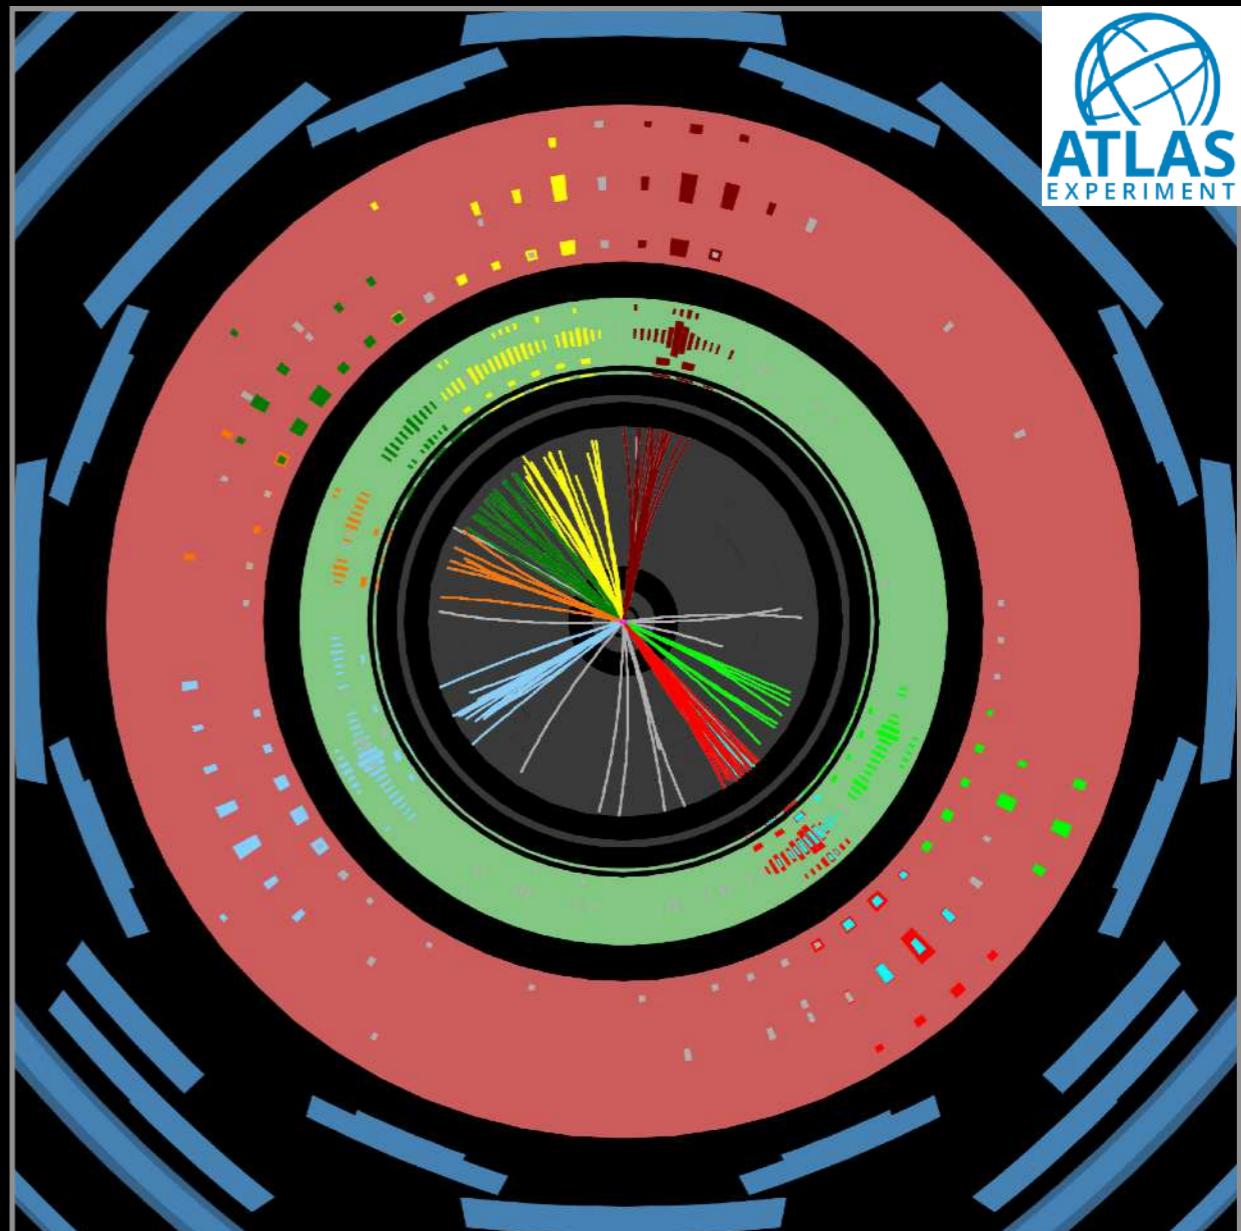

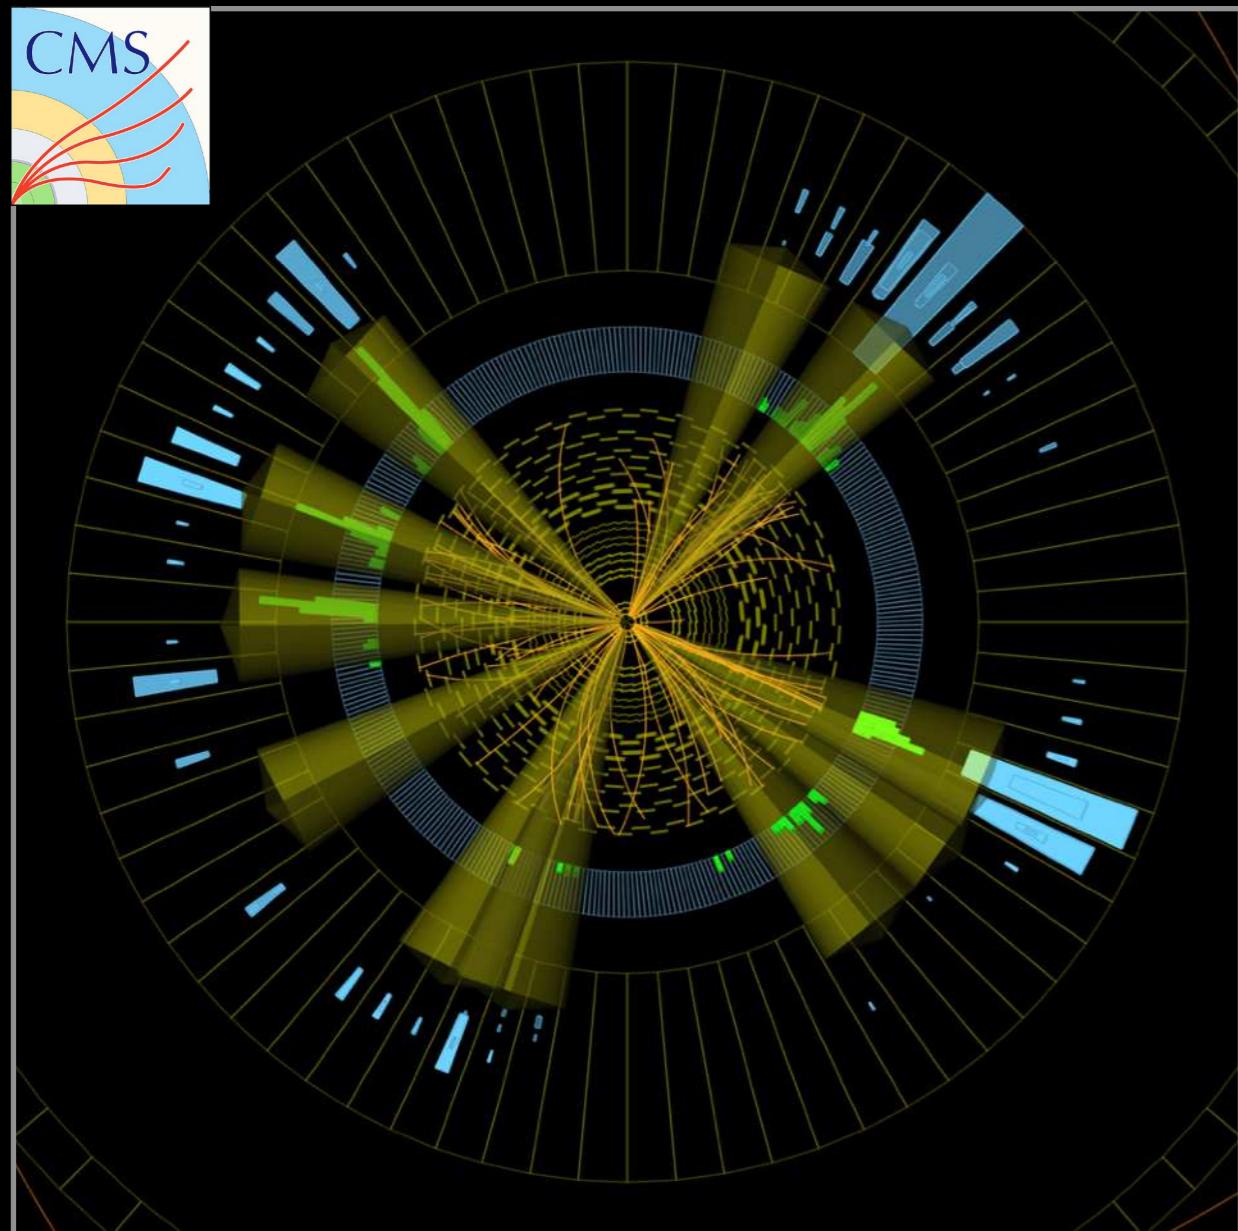

## *Event Space Geometry*

# Two Collider Events

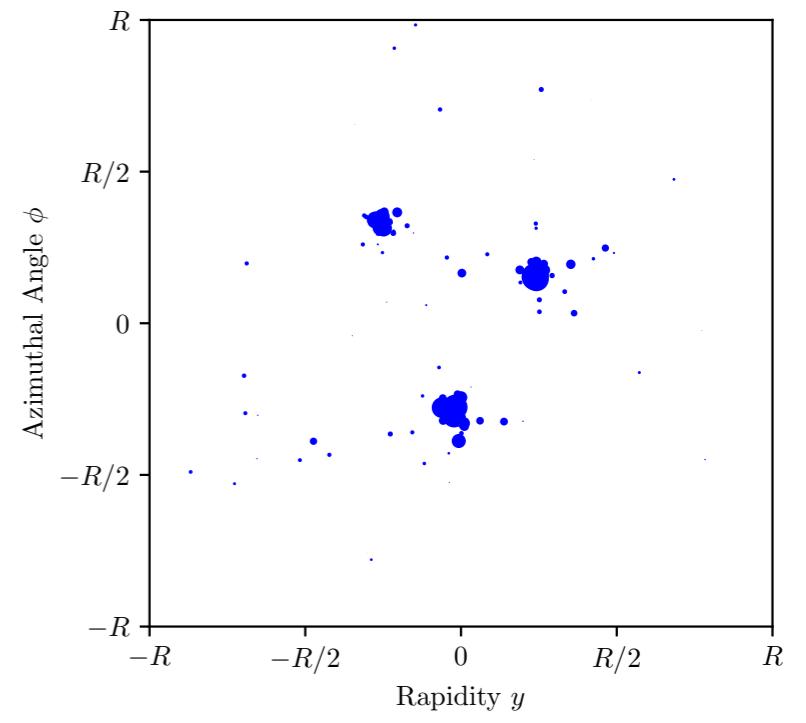

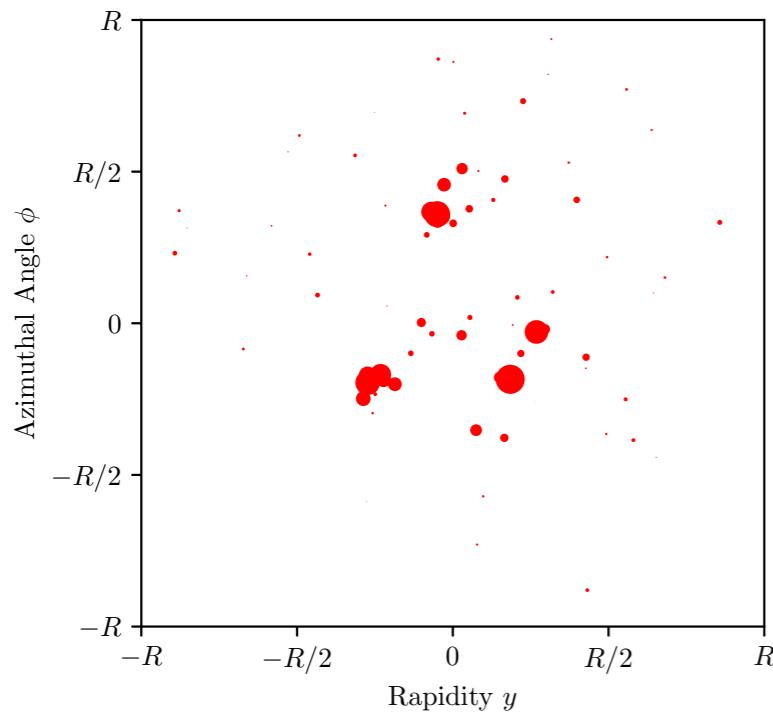

Two collections of points in momentum space

How “close” are these? (8.5 km?)

# Similarity of Two Jets?

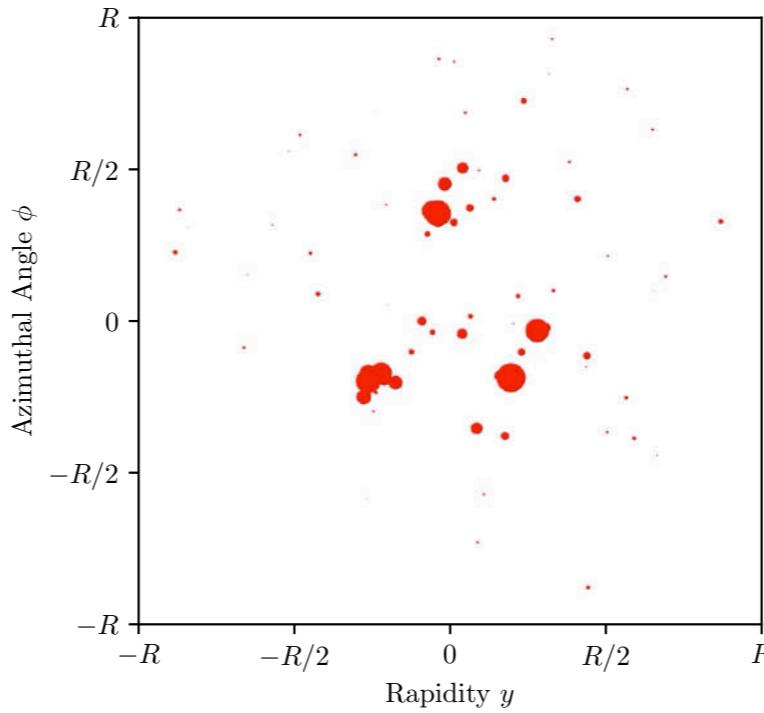

$$\mathcal{E}(\hat{n}) = \sum_i \textcolor{teal}{E}_i \delta(\hat{n} - \hat{n}_i)$$

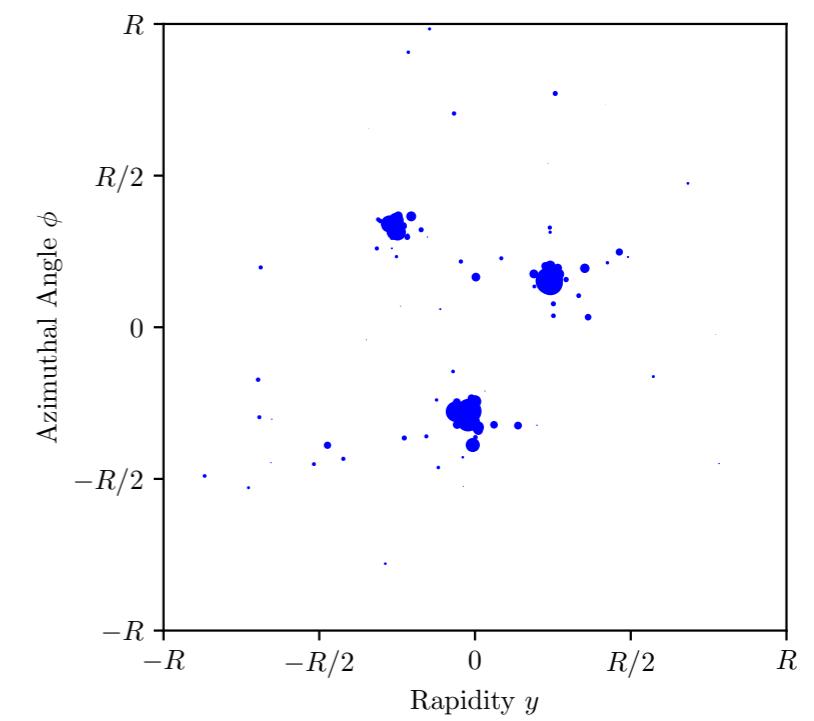

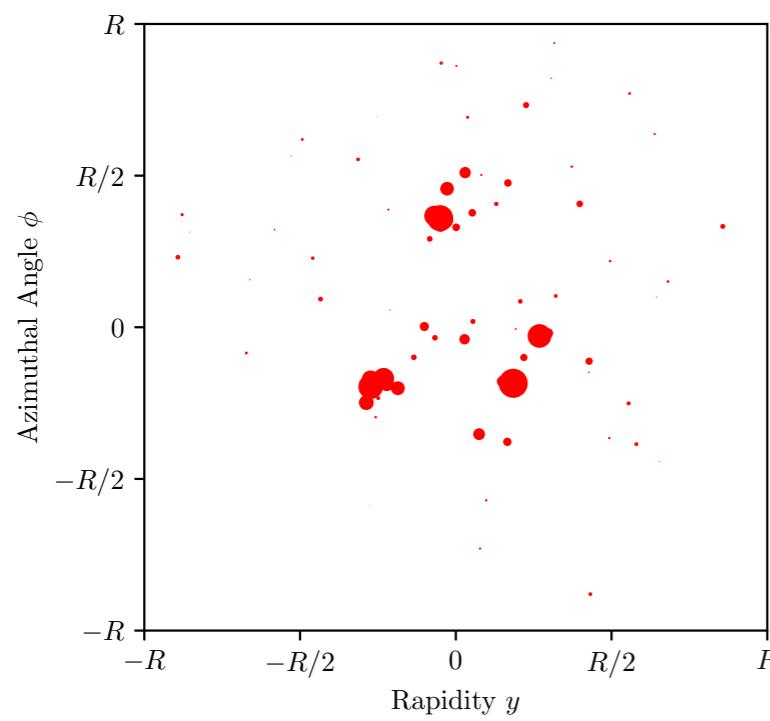

[Komiske, Metodiev, JDT, PRL 2019; code at Komiske, Metodiev, JDT, [energyflow.network](#)]

# Similarity of Two Jets?

$$\mathcal{E}(\hat{n}) = \sum_i \textcolor{teal}{E}_i \delta(\hat{n} - \hat{n}_i)$$

Optimal Transport:  
*Earth Mover's Distance*  
a.k.a.  $l$ -Wasserstein metric

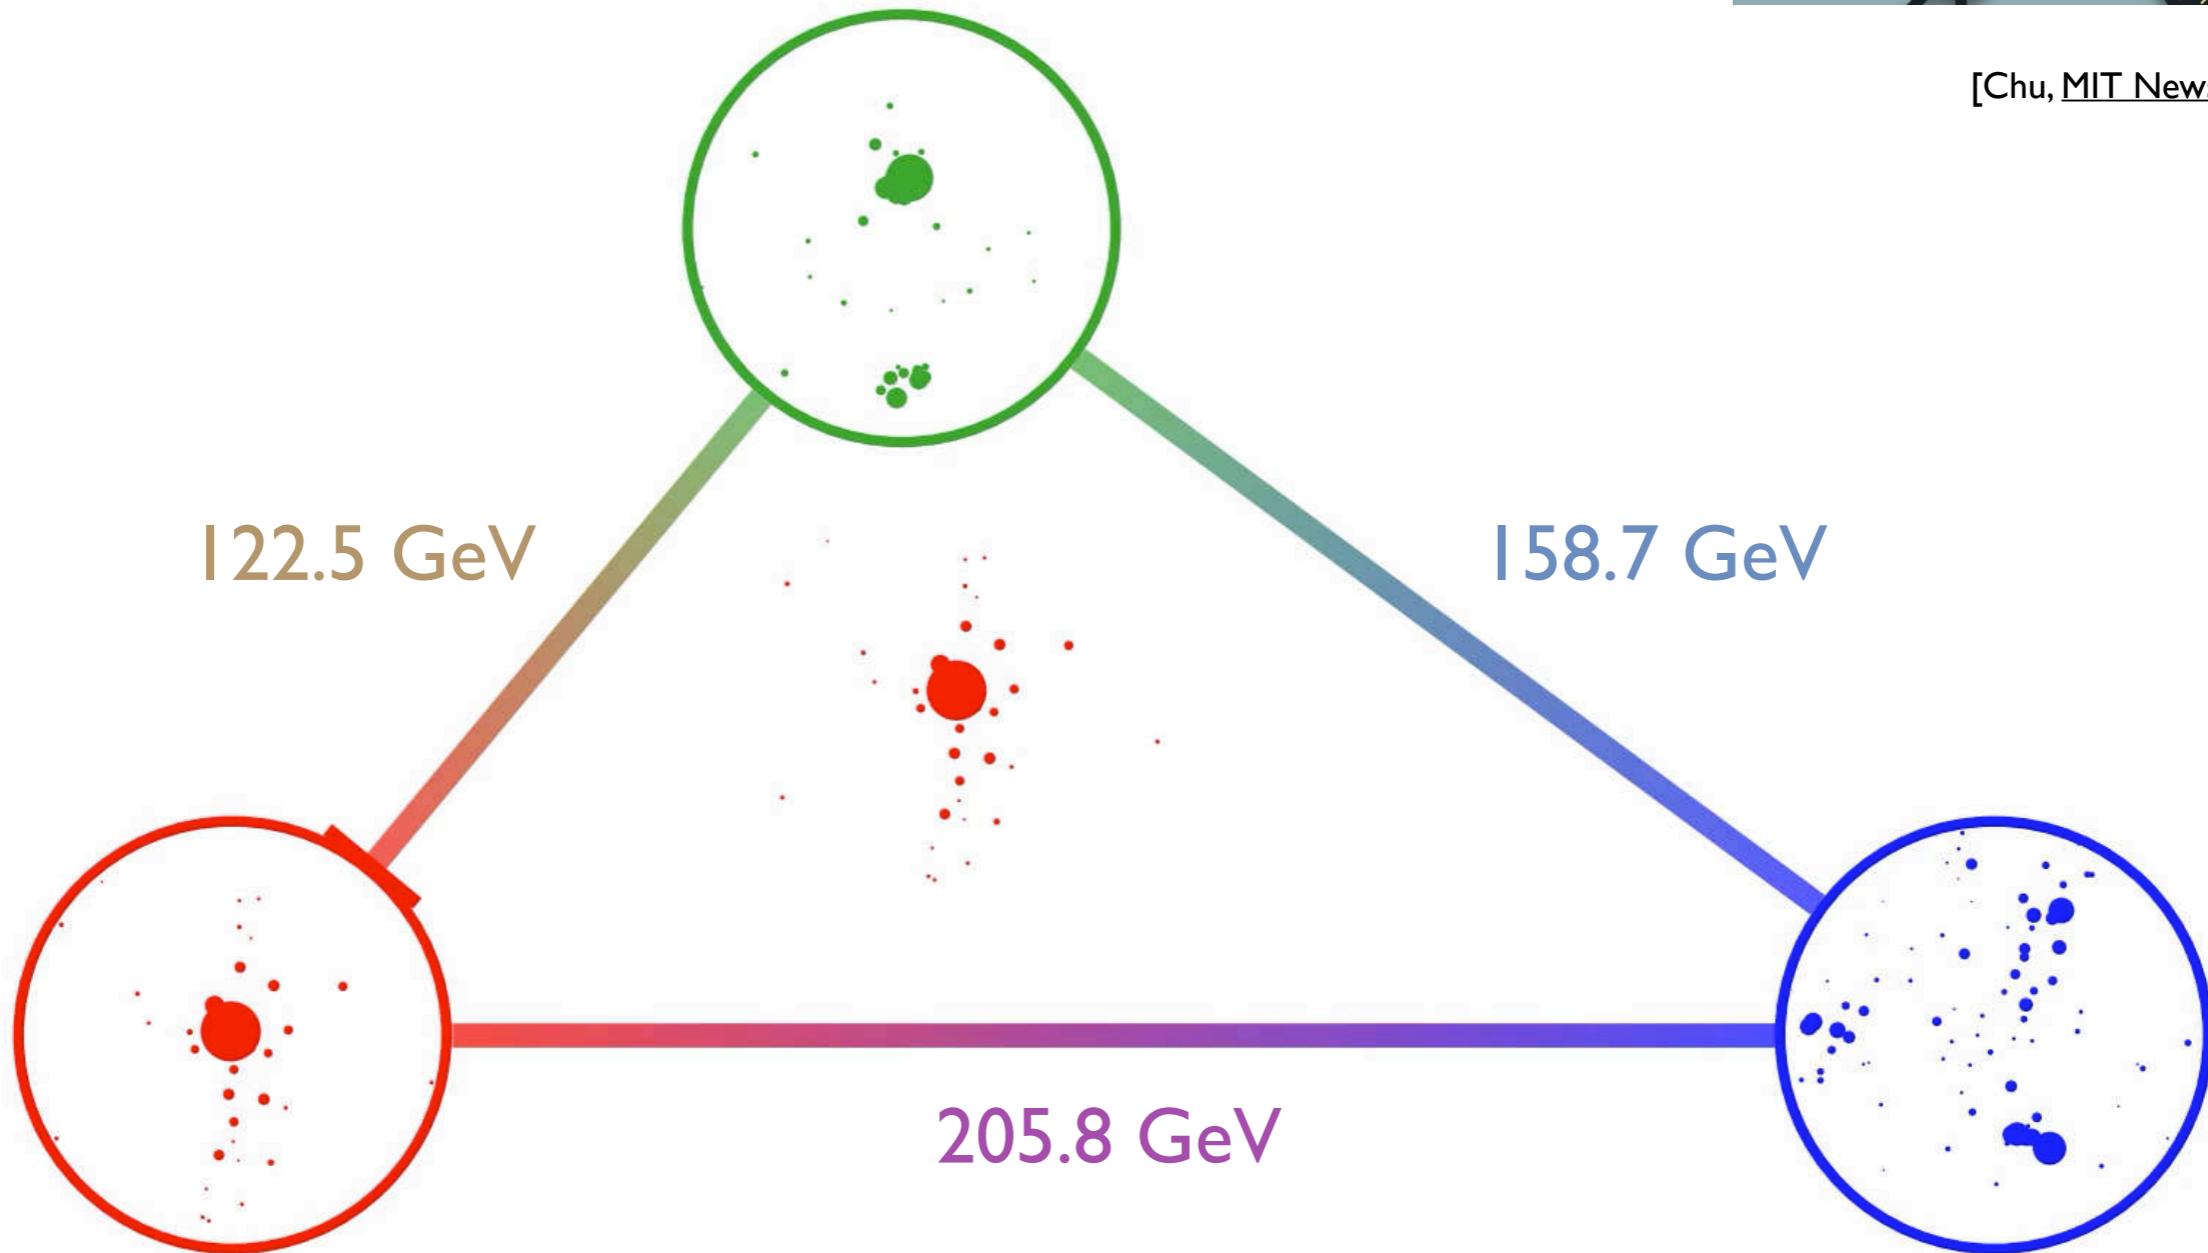

[Komiske, Metodiev, JDT, PRL 2019; code at Komiske, Metodiev, JDT, [energyflow.network](#)]

# Triangulating the Space of Jets

*Three jets from the CMS Open Data*

[Chu, MIT News July 2019]

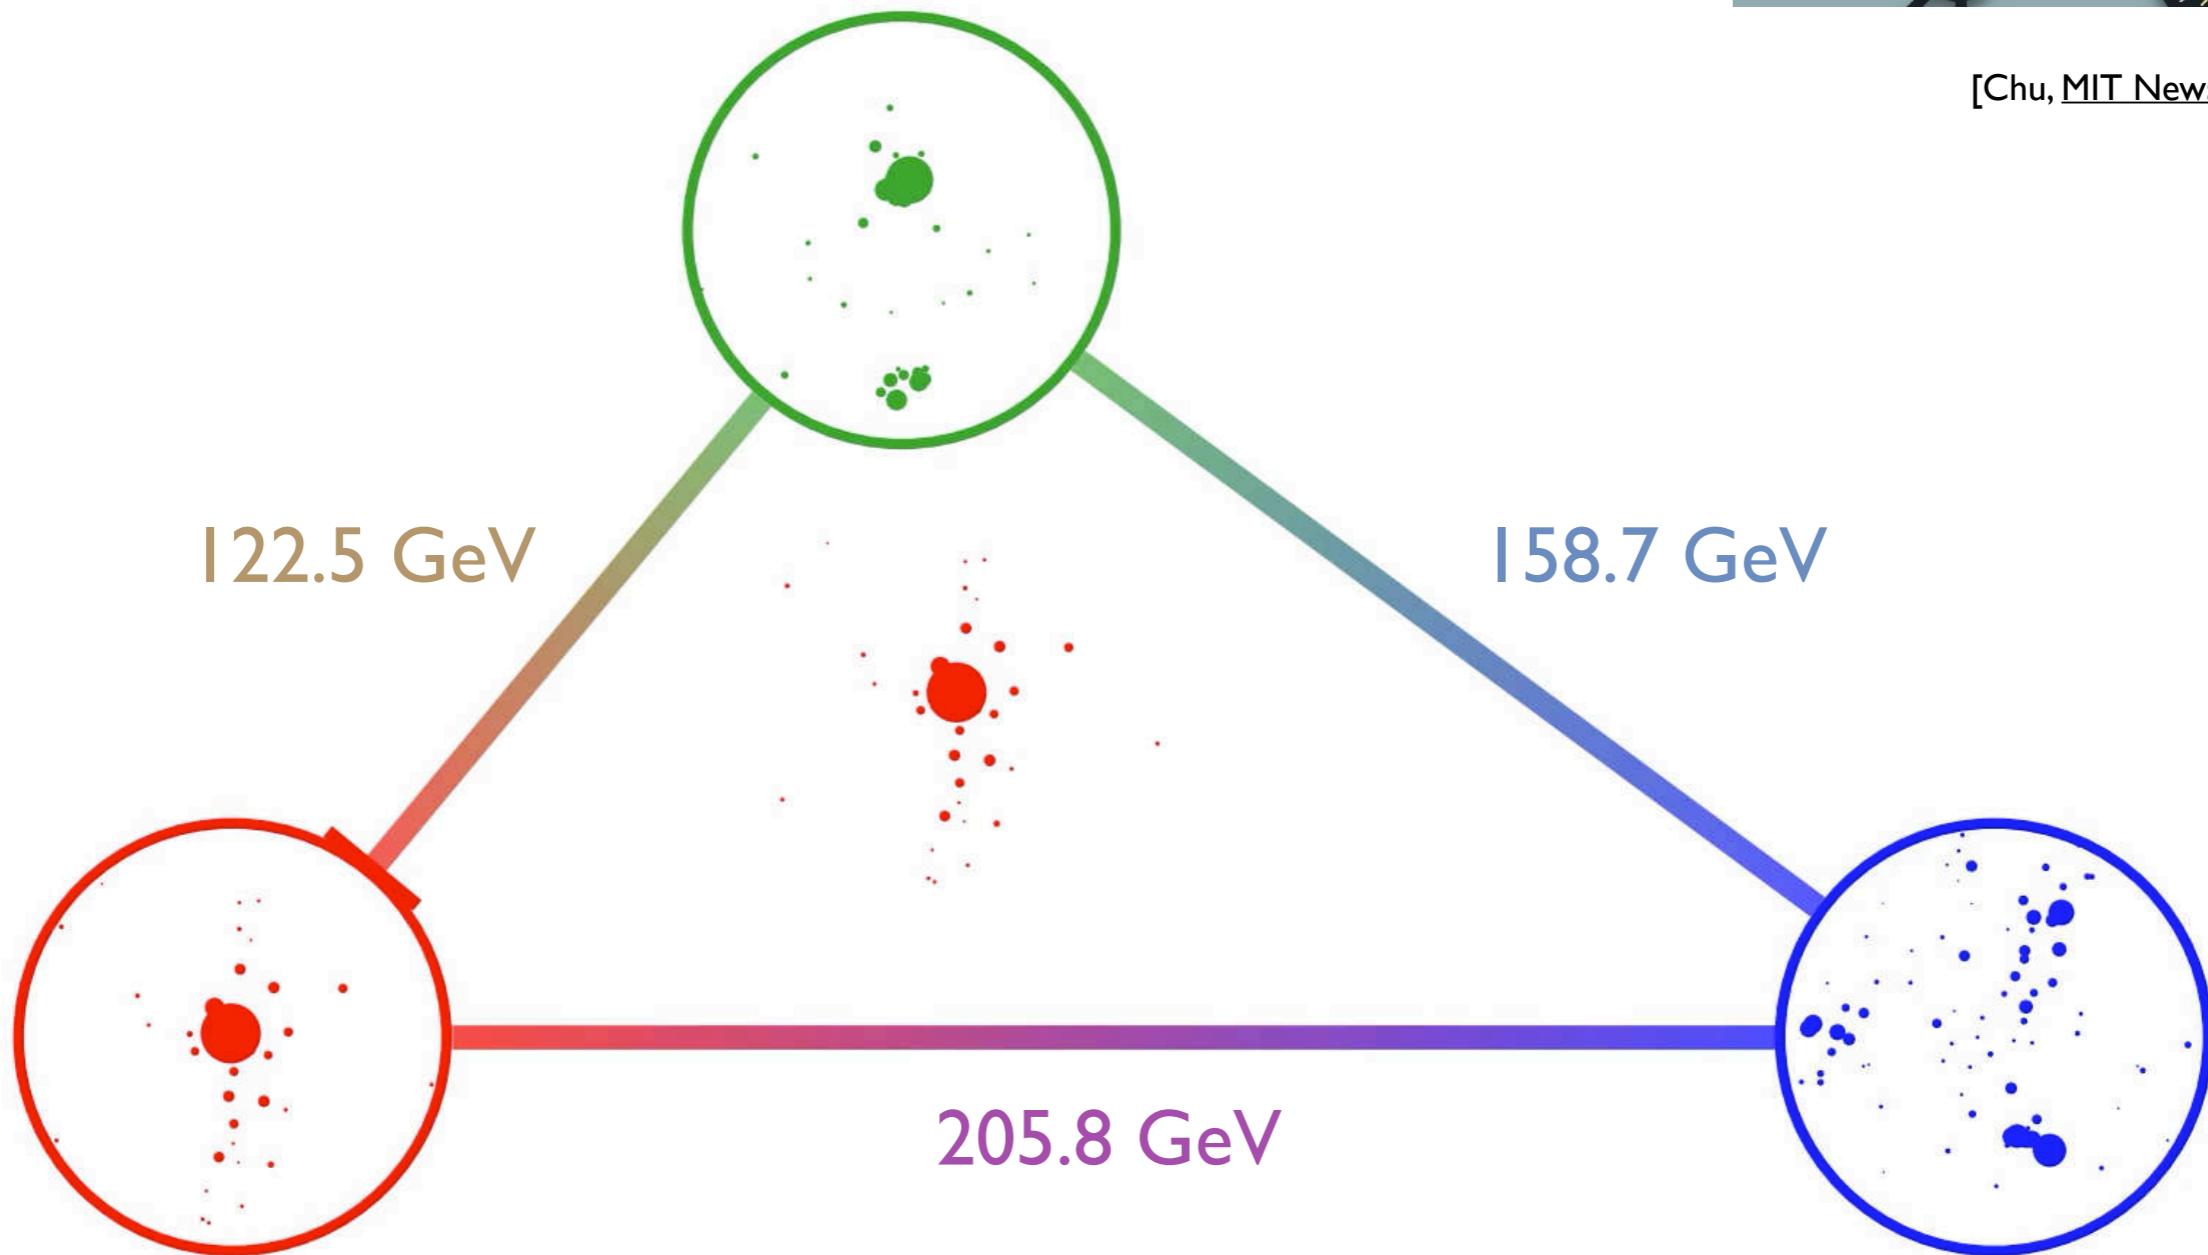

[Komiske, Metodiev, JDT, PRL 2019; code at Komiske, Metodiev, JDT, [energyflow.network](#)]

### A. Challenges

### B. Recommendations

## VI. CONCLUSION

As the LHC explores the frontiers of scientific knowledge, its primary legacy will be the measurements and discoveries made by the LHC detector collaborations. But there is another potential legacy from the LHC that could be just as important: granting future generations of physicists access to unique high-quality data sets from proton-proton collisions at 7, 8, 13, and 14 TeV.
